**##### START OF CHANGE #####**

### **Role Assertion with Certificates**

This clause describes role assertion by a client to a server using a certificate role credential. If a server does not support the certificate credential type, clients should not attempt to assert roles with certificates.

Following authentication with a certificate, an OCF Client shall assert roles by updating the server's "/oic/sec/roles" Resource with all the role certificates it possesses, unless the device manufacturer provides a vendor-specific mechanism for End User to select which roles to assert.
