1 Scope

This specification defines functional extensions to the capabilities defined in the OCF Core Specification to meet the requirements of Wi-Fi Easy Setup. This specification specifies new Resource Types to enable the functionality and any extensions to the existing capabilities defined in the OCF Core Specification.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms, definitions, symbols and abbreviations

All terms and definitions as defined in the OCF Core Specification also apply to this specification.

3.1 Terms and definitions

As defined in the OCF Core Specification with the following additions

3.1.1. Easy Setup Enrollment

Easy Setup Enrollment is a step during Easy Setup in which the Enrollee is contacted by the Mediator to configure the Enroller’s information by means of accessing Easy Setup Resources.

3.1.2. Enrollee

The Device that needs to be configured and connected. E.g. Air-conditioner, Printer.

3.1.3. Enroller

Target network entity to which the Enrollee connects. E.g. Wi-Fi Access Point

3.1.4. Mediator

Device (for example a Mobile Phone) that enables the Enrollee to connect to the target network (Enroller). The Mediator transfers configuration information to the Enrollee.

3.1.5. Easy Setup

Process of configuring an Enrollee to an Enroller using a Mediator (by the transferring of essential information about the Enroller to the Enrollee).

3.1.6. Soft AP

Software Enabled Access Point hosted on the Enrollee which is not a dedicated Access Point.

3.2 Conventions

In this specification a number of terms, conditions, mechanisms, sequences, parameters, events, states, or similar terms are printed with the first letter of each word in uppercase and the rest lowercase (e.g., Network Architecture). Any lowercase uses of these words have the normal technical English meaning.

3.3 Data types

As defined in the OCF Core Specification.
4 Document conventions and organization

In this document, features are described as required, recommended, allowed or DEPRECATED as follows:

Required (or shall or mandatory)(M).

• These basic features shall be implemented to comply with Core Architecture. The phrases “shall not”, and “PROHIBITED” indicate behaviour that is prohibited, i.e. that if performed means the implementation is not in compliance.

Recommended (or should)(S).

• These features add functionality supported by Core Architecture and should be implemented. Recommended features take advantage of the capabilities Core Architecture, usually without imposing major increase of complexity. Notice that for compliance testing, if a recommended feature is implemented, it shall meet the specified requirements to be in compliance with these guidelines. Some recommended features could become requirements in the future. The phrase “should not” indicates behaviour that is permitted but not recommended.

Allowed (may or allowed)(O).

• These features are neither required nor recommended by Core Architecture, but if the feature is implemented, it shall meet the specified requirements to be in compliance with these guidelines.

DEPRECATED.

• Although these features are still described in this specification, they should not be implemented except for backward compatibility. The occurrence of a deprecated feature during operation of an implementation compliant with the current specification has no effect on the implementation’s operation and does not produce any error conditions. Backward compatibility may require that a feature is implemented and functions as specified but it shall never be used by implementations compliant with this specification.

Conditionally allowed (CA)

• The definition or behaviour depends on a condition. If the specified condition is met, then the definition or behaviour is allowed, otherwise it is not allowed.

Conditionally required (CR)

• The definition or behaviour depends on a condition. If the specified condition is met, then the definition or behaviour is required. Otherwise the definition or behaviour is allowed as default unless specifically defined as not allowed.

Strings that are to be taken literally are enclosed in “double quotes”.

Words that are emphasized are printed in italic.
5 Overview

5.1 Introduction
This specification describes a way to setup and configure a new Device, using an already configured Device or onboarding tool.

The described setup and configure mechanism is optional and other mechanisms are allowed to be used.

Specifically, this method allows the transferring of essential information to the new Device, which includes:

- Local network connection information, e.g. in case of Wi-Fi it will be Wi-Fi access point information.
- Device Configuration: Additional Device configuration information.

Easy Setup can be enhanced in future by incorporating other suitable technologies.

5.2 Architecture
Figure 1 shows the deployment architectural approach.

![Figure 1. Easy Setup deployment architecture]

Easy Setup defines the following roles: Enrollee, Enroller, and Mediator. Please refer to Section 3.1 for definitions thereof.

5.3 Example Scenario
The following scenario presents a typical setup case.

The configuration information and steps taken may vary depending on the Device's type and status.

1. The Enrollee enters Easy Setup mode (when the Device is unboxed for the first time, it may be in this mode by default).

2. The Mediator discovers and connects to the Enrollee.

4. The Mediator transmits Wi-Fi Setting Information to the Enrollee.

5. Using the information received from the Mediator, the Enrollee connects to the Enroller (Wi-Fi AP).
6 Resource model

6.1 Introduction

Devices capable of Easy Setup shall support the following Resource Types.

1. EasySetup Resource Type
2. WiFiConf Resource Type
3. DevConf Resource Type

The EasySetup Resource Type is a Collection Resource and shall contain Links to instances of at least WiFiConf and DevConf. A vendor may add links to other Resource Types.

Note that the EasySetup Resource Type supports the batch Interface (oic.if.b) which allows for efficient data delivery with a single request rather than multiple requests to each linked Resource.

![Figure 2. Easy Setup Resource Types](image)

6.2 EasySetup Resource

6.2.1 Overview

The EasySetup Resource stores useful information including current status of Enrollee and last error code which was produced in the process of Easy Setup.

6.2.2 Resource

The Easy Setup Resource Type is as defined in Table 1. EasySetup Resource Type.

<table>
<thead>
<tr>
<th>Example URI</th>
<th>Resource Type Title</th>
<th>Resource Type ID (&quot;rt&quot; value)</th>
<th>Interfaces</th>
<th>Description</th>
<th>Related Functional Interaction</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

Array of links that are WiFiConf and DevConf Resource.

Enrollee shall set the following as default values (for example, when Device is unboxed first time):

- “ps” equal to 0.
- “lec” equal to 0.
- “cn” equal to an empty array.

6.3 WiFiConf Resource Type

6.3.1 Introduction

The WiFiConf Resource Type stores information to help an Enrollee to connect to an existing Wi-Fi AP.

6.3.2 Resource Type

The WiFiConf Resource Type is as defined in Table 3. WiFiConf Resource Type.
Table 3. WiFiConf Resource Type

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

6.4 DevConf Resource Type

6.4.1 Introduction

The DevConf Resource Type stores Device configuration information required in Wi-Fi Easy Setup.
6.4.2 Resource Type

The DevConf Resource Type is as defined in Table 5. DevConf Resource Type

Table 5. DevConf Resource Type

<table>
<thead>
<tr>
<th>Example URI</th>
<th>Resource Type Title</th>
<th>Resource Type ID (&quot;rt&quot; value)</th>
<th>Interfaces</th>
<th>Description</th>

<td></td>
<td></td>
<td>R</td>
<td>Yes</td>
<td>Indicates a pre-configured device name in language indicated by 'dl' in /oic/con. or An array of objects where each object has a 'language' field (containing an IETF RFC 5646 language tag) and a 'value' field containing the pre-configured device name in the indicated language. The pre-configured device name is presented by enrollee to mediator during easy-setup process.</td>
</tr>
</tbody>
</table>
7  Network and connectivity

Both the Mediator and Enrollee communicate via a common connectivity (e.g. Wi-Fi).

If using Wi-Fi for Easy Setup then the Enrollee shall have capability to act as a Soft AP. A Soft AP shall support the access point requirements defined by IEEE 802.11:2016.
8 Functional interactions

8.1 Onboarding, Provisioning and Configuration

Mediator may perform Ownership Transfer on the Enrollee and may also perform ACL provisioning. If it does so, the Mediator must conform to any existing DOXS and AMS requirements respectively. For details refer to the OCF Security Specification.

8.2 Resource discovery

The Mediator connects to the Enrollee via a mutually supported connection.

When in Easy Setup phase, if using Wi-Fi as the connectivity between the Enrollee and the Mediator then the Enrollee shall make itself discoverable as a Soft AP. The Soft AP has additional availability constraints which are documented in the OCF Security Specification.

8.3 Retrieving and Updating Easy Setup Resources

The Enrollee shall expose Easy Setup Resources such that a Mediator is able to discover them using standard OCF Resource discovery methods (i.e. via a RETRIEVE on /oic/res); see the OCF Core Specification, Section 11.3.

Easy Setup Resources shall expose only secure Endpoints (e.g. CoAPS); see the OCF Core Specification, Section 10.

The Mediator may request retrieval of an Easy Setup Resource to check the Enrollee’s status at any stage of Easy Setup. This applies only when the Enrollee & the Mediator are on a common network.

The Mediator may request that the Enrollee update its Resource Property(-ies). Upon request from the Mediator the Enrollee shall update its current Resource Property Values, and shall perform any required action. For example, if the “cn” Property of “EasySetup” Resource is updated by the Mediator, to indicate connection to Wi-Fi, the Enrollee shall start the connection to Enroller.

For details of Easy Setup Resources refer to Section 6.

8.4 Error Handling

The “lec” Property of the EasySetup Resource (i.e. oic.r.easysetup) is used to indicate the error that occurred in the Easy Setup process while trying to connect to the Enroller (using the information provided by the Mediator in WiFiConf Resource):

- The Enrollee shall set “lec” Property to 1, if it fails to connect because it can’t find the SSID.
- The Enrollee shall set “lec” Property to 2, if it fails to connect due to wrong credential (password) information.
- The Enrollee should set “lec” Property to 6, if the Auth type is not supported by the Enrollee.
- The Enrollee should set “lec” Property to 7, if the Encryption type is not supported by the Enrollee.
- The Enrollee should set “lec” Property to 8, if it fails to connect due to wrong Auth type information (even though it’s supported by the Enrollee).
- The Enrollee should set “lec” Property to 9, if it fails to connect due to wrong Encryption type information (even though it’s supported by the Enrollee).
When using Wi-Fi as the connectivity between the Enrollee and Mediator, if the Enrollee fails to connect to the Enroller, it shall again make itself discoverable as a Soft AP (in case it destroyed its Soft AP earlier).

8.5 Example Easy Setup Flow

The following figure shows an example Easy Setup flow for informative purposes:
Figure 3. Easy Setup Flow (Informative)

The example flow above undergoes security provisioning (step 6) during Easy Setup. Alternatively security provisioning can be done before Enrollee Discovery (steps 4 and 5) if preferred. Please refer to the OCF Security Specification for more information on the different scenarios.
9 Security

Wi-Fi Easy Setup security requirements are captured in the OCF Security Specification.
Annex A (normative)

Resource Type definitions

A.2 Easy Setup Collection Baseline Interface

A.2.1 Introduction

Easy Setup resource stores useful information including current status of unboxing device and last error code which are produced in a process of easy setup. Note that, Easy Setup resource is a type of collection resource, which contains links to WiFiConf, DevConf resources and may additionally contain links to other resources.

A.2.2 Example URI

/exampleEasySetupBaselineInterfaceResURI

A.2.3 Resource Type

The resource type (rt) is defined as: oic.r.easysetup.

A.2.4 RAML Definition

A.3 Wi-Fi Configuration Resource Baseline Interface

A.3.1 Introduction

WiFiConf resource stores essential information to help an unboxing device to connect to an existing Wi-Fi AP.

A.3.2 Example URI

/example/WiFiConfBaselineInterfaceResURI

A.3.3 Resource Type

The resource type (rt) is defined as: oic.r.wificonf.

A.3.4 RAML Definition

```yaml
#%RAML 0.8
title: Wi-Fi Configuration Resource
version: v0.0.3-20170611
traits:
  - interface-rw:
    queryParameters:
      if:
        enum: ["oic.if.rw"]
  - interface-baseline:
    queryParameters:
      if:
        enum: ["oic.if.baseline"]
  - interface-all:
    queryParameters:
      if:
        enum: ["oic.if.baseline", "oic.if.rw"]

B.2 EasySetup Collection

B.2.1 Introduction

Easy Setup resource stores useful information including current status of unboxing device and last error code which are produced in a process of easy setup. Note that, Easy Setup resource is a type of collection resource, which contains links to WiFiConf, DevConf resources and may additionally contain links to other resources.

B.2.2 Example URI

/exampleEasySetupBaselineInterfaceResURI

B.2.3 Resource Type

The resource type (rt) is defined as: ['oic.r.easysetup', 'oic.wk.col'].

B.2.4 Swagger2.0 Definition

B.3 Wi-Fi Configuration Resource

B.3.1 Introduction

WiFiConf resource stores essential information to help an unboxing device to connect to an existing Wi-Fi AP.

B.3.2 Example URI

/example/WiFiConfBaselineInterfaceResURI

B.3.3 Resource Type

The resource type (rt) is defined as: ['oic.r.wificonf'].

B.3.4 Swagger2.0 Definition
