Introduction

This document, and all the other parts associated with this document, were developed in response to worldwide demand for smart home focused Internet of Things (IoT) devices, such as appliances, door locks, security cameras, sensors, and actuators; these to be modelled and securely controlled, locally and remotely, over an IP network.

While some inter-device communication existed, no universal language had been developed for the IoT. Device makers instead had to choose between disparate frameworks, limiting their market share, or developing across multiple ecosystems, increasing their costs. The burden then falls on end users to determine whether the products they want are compatible with the ecosystem they bought into, or find ways to integrate their devices into their network, and try to solve interoperability issues on their own.

In addition to the smart home, IoT deployments in commercial environments are hampered by a lack of security. This issue can be avoided by having a secure IoT communication framework, which this standard solves.

The goal of these documents is then to connect the next 25 billion devices for the IoT, providing secure and reliable device discovery and connectivity across multiple OSs and platforms. There are multiple proposals and forums driving different approaches, but no single solution addresses the majority of key requirements. This document and the associated parts enable industry consolidation around a common, secure, interoperable approach.

The OCF specification suite is made up of nineteen discrete documents, the documents fall into logical groupings as described herein:

- Core framework
  - Core Specification
  - Security Specification
  - Onboarding Tool Specification
- Bridging framework and bridges
  - Bridging Specification
  - Resource to Alljoyn Interface Mapping Specification
  - OCF Resource to oneM2M Resource Mapping Specification
  - OCF Resource to BLE Mapping Specification
  - OCF Resource to EnOcean Mapping Specification
  - OCF Resource to LWM2M Mapping Specification
  - OCF Resource to UPlus Mapping Specification
  - OCF Resource to Zigbee Cluster Mapping Specification
  - OCF Resource to Z-Wave Mapping Specification
- Resource and Device models
  - Resource Type Specification
  - Device Specification
- Core framework extensions
  - Easy Setup Specification
  - Core Optional Specification
- OCF Cloud
  - Cloud API for Cloud Services Specification
– Device to Cloud Services Specification
– Cloud Security Specification
OCF Resource Type Specification

1 Scope

This document specifies the Resources that have been defined by OCF that may be exposed by an OCF Device.

Application profile device documents (for example those created for Smart Home or Healthcare) specify device types appropriate to the profile; such documents use Resource Type definitions from this document.

This document is built on top of ISO/IEC 30118-1. ISO/IEC 30118-1 specifies the OCF Framework that enables the implementation of profiles for IoT usages and ecosystems. The OCF Core Framework is scalable to support simple devices (constrained device) and more capable devices (smart device).

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3.1.3 sensor
Resource without support of the UPDATE operation
3.2 Symbols and abbreviated terms

BF Backward Frame
CRUDN Create Retrieve Update Delete Notify
DALI Digital Addressable Lighting Interface
FF Forward Frame

4 Document conventions and organization

4.1 Conventions

In this document a number of terms, conditions, mechanisms, sequences, parameters, events, states, or similar terms are printed with the first letter of each word in uppercase and the rest lowercase (e.g., Resource Type). Any lowercase uses of these words have the normal technical English meaning.

In this document, to be consistent with the IETF usages for RESTful operations, the RESTful operation words CRUDN, CREATE, RETRIEVE, UPDATE, DELETE, and NOTIFY will have all letters capitalized. Any lowercase uses of these words have the normal technical English meaning.

4.2 Notation

In this document, features are described as required, recommended, allowed or DEPRECATED as follows:

Required (or shall or mandatory).

These basic features shall be implemented to comply with OCF Resource Type Specification. The phrases "shall not", and "PROHIBITED" indicate behaviour that is prohibited, i.e. that if performed means the implementation is not in compliance.

Recommended (or should).

These features add functionality supported by the OCF Resource Type Specification and should be implemented. Recommended features take advantage of the capabilities of the OCF Resource Type Specification, usually without imposing major increase of complexity. Notice that for compliance testing, if a recommended feature is implemented, it shall meet the specified requirements to be in compliance with these guidelines. Some recommended features could become requirements in the future. The phrase "should not" indicates behaviour that is permitted but not recommended.

Allowed (or allowed).

These features are neither required nor recommended by OCF Resource Type Specification, but if the feature is implemented, it shall meet the specified requirements to be in compliance with these guidelines.

DEPRECATED

Although these features are still described in this document, they should not be implemented except for backward compatibility. The occurrence of a deprecated feature during operation of an implementation compliant with the current document has no effect on the implementation’s operation and does not produce any error conditions. Backward compatibility may require that a feature is implemented and functions as specified but it shall never be used by implementations compliant with this document.

Conditionally allowed (CA)

The definition or behaviour depends on a condition. If the specified condition is met, then the definition or behaviour is allowed, otherwise it is not allowed.

Conditionally required (CR)
The definition or behaviour depends on a condition. If the specified condition is met, then the definition or behaviour is required. Otherwise the definition or behaviour is allowed as default unless specifically defined as not allowed.

Strings that are to be taken literally are enclosed in "double quotes".

Words that are emphasized are printed in italic.

5 Baseline model constructs

5.1 URI

The URIs mentioned in this document are non-normative, they may be vendor defined.

An Instance of a Resource is indicated by the URI. When more than one instance of the same Resource Type is used in a Device, different URIs for the different Resource instances shall be used.

An implementation shall follow the requirements defined in ISO/IEC 30118-1 with respect to population of the URI. Please refer to the ISO/IEC 30118-1 clauses 6.2 and 6.3 for specific details.

5.2 OCF Interfaces

5.2.1 Introduction

ISO/IEC 30118-1 specifies that all Resource Types have associated with them at least one OCF Interface; this OCF Interface is advertised during Resource discovery. In addition ISO/IEC 30118-1 defines a number of OCF Interfaces that can be applied to an instance of a Resource Type.

The difference between using sensor/actuator and read/write OCF Interfaces is due to the fact that a sensor/actuator interface describes an action that has immediate effect on the Device, either by reading the sensed value and putting the value on the wire, or as an UPDATE action that something needs to happen (e.g. actuate) on the Device. The read/write OCF Interface is typically used to set a settings value on the Device that might be used later when an action occurs. A typical example is setting the coffee strength that will be used when the coffee is brewed.

5.2.2 Restricting OCF Interface functionality

Note that the functionality associated with, or visibility of, an instance of any Resource exposed by a Device may be restricted depending upon local (per country or legislative region) regulatory requirements or other restrictions (e.g. with respect to Binary Switch in some jurisdictions the ability to remotely power on a connected device is restricted; a lock status could be read-only depending on the context).

The actual implementation of a resource can be limited by:

– Not implementing the optional Properties defined in the payload of a CRUDN operation.
– Removing CRUDN operations

If an UPDATE operation of a resource that can be actuated is not implemented, this change in behaviour is indicated by changing the OCF Interfaces accordingly.

When the resource is defined with the OCF Interface "oic.if.a", and the UPDATE operation is removed then the OCF Interface listed shall be "oic.if.s".

When the resource is defined with the OCF Interface "oic.if.rw", and the UPDATE operation is removed then the OCF Interface listed shall be "oic.if.r".

5.3 OpenAPI specification 2.0 definition

The OpenAPI Specification 2.0 definitions provided in clause 6 in this document are normative.
The OpenAPI Specification 2.0 definitions are used to describe the payloads of the CRUDN operations on the specified Resource Type. The CRUDN operations are defined in ISO/IEC 30118-1. ISO/IEC 30118-1 also specifies additional Properties in the payloads of the CRUDN operations. The OpenAPI Specification 2.0 definitions in this document are not of themselves sufficient to create an implementation, additional Properties defined in ISO/IEC 30118-1 need to be added to create a compliant implementation. This document makes use of a subset of the responses supported by OpenAPI Specification 2.0, specifics on the use of these responses are defined in Table 4. Note that the actual values of success and error conditions are defined in ISO/IEC 30118-1.

The OpenAPI Specification 2.0 definitions map the OCF CRUDN behaviour to the OpenAPI Specification 2.0 as defined in Table 1.

Table 1 – Conversion between OCF CRUDN and OpenAPI specification 2.0 definitions

<table>
<thead>
<tr>
<th>Resource</th>
<th>Create</th>
<th>Retrieve</th>
<th>Update</th>
<th>Delete</th>
<th>Notify</th>
</tr>
</thead>
<tbody>
<tr>
<td>/example</td>
<td>post</td>
<td>get</td>
<td>post</td>
<td>delete</td>
<td>N/A</td>
</tr>
</tbody>
</table>

Notify is not part of an OpenAPI Specification 2.0 definition but is defined in ISO/IEC 30118-1. All Resource Types defined in this document support notification via the use of observe as defined in ISO/IEC 30118-1 clause 11.4.2.

5.4 Property definition

5.4.1 Common Properties

ISO/IEC 30118-1 specifies a number of Properties that may be defined for Resources. The Common Properties "if" and "rt" shall be specified for all Resource Types defined in this document; they are exposed within the ISO/IEC 30118-1 defined "/oic/res/" Resource Type through which the Server and its available Resources are discovered. The Common Properties "id" and "n" may be specified for all Resource Types defined in this document. Table 2 lists all of the noted Common Properties.

If a Client requires that these Properties be included in a Resource representation that is provided in response to a RETRIEVE operation then the Client shall select the ISO/IEC 30118-1 defined baseline OCF Interface ("oic.if.baseline") by specifying this in a query parameter.

Table 2 – Common Properties for Resources

<table>
<thead>
<tr>

<td>Name</td>
<td>See ISO/IEC 30118-1 clause 7.3.2.5</td>
<td>String</td>
<td>Readonly</td>
<td>Core defined; human understandable name for the Resource</td>
</tr>
</tbody>
</table>

1 Please refer to ISO/IEC 30118-1 Table 26 for detailed semantics around the appropriate use of CoAP request methods.
### 5.4.2 Resource Properties

#### 5.4.2.1 Introduction

The Properties against which the CRUDN operations are specified are defined as part of an OpenAPI Specification 2.0 definition.

A basic Resource Type is formulated around one single value denoting a physical property.

Such a Resource Type is specified with the Properties as defined Table 3. Mandatory in the table means that the Property shall be defined as part of the overall Resource Type schema; actual inclusion of the Property as part of a returned or generated payload is dependent upon the schema that applies to the operation being invoked.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Friendly Alias Name</th>
<th>Property Value</th>
<th>Value Type</th>
<th>Value Rules</th>
<th>Access Modes</th>
<th>Mandatory</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;value&gt;, name may change dependent on the Resource</td>
<td>&lt;value&gt;, name may change dependent on the Resource</td>
<td>Dependent on the Resource</td>
<td>Dependent on the Resource</td>
<td>Dependent on the Resource</td>
<td>Dependent on the Resource</td>
<td>yes</td>
<td>The current value of the Resource</td>
</tr>
<tr>
<td>range</td>
<td>Range</td>
<td>[Min,Max]</td>
<td>array of integers or numbers</td>
<td>Linear range</td>
<td>Read-only</td>
<td>no</td>
<td>Range of input values, specified as a two element array. See clause 5.4.2.2.</td>
</tr>
<tr>
<td>step</td>
<td>Step</td>
<td>Dependent on the Resource</td>
<td>Integer or Number</td>
<td>Dependent on the Resource</td>
<td>Read-only</td>
<td>no</td>
<td>Step value across the defined range. See clause 5.4.2.3.</td>
</tr>
<tr>
<td>precision</td>
<td>Precision</td>
<td>Dependent on the Resource</td>
<td>Number</td>
<td>Dependent on the Resource</td>
<td>Read-only</td>
<td>no</td>
<td>Accuracy granularity of the exposed value. See clause 5.4.2.4.</td>
</tr>
</tbody>
</table>

For Resources, which by their nature have more than one physical parameter, the value Property can be replaced with multiple Properties specifying the different physical parameters, or with further structures such as arrays of Properties, objects, or Collections. The type of the value shall be indicated in the OpenAPI Specification 2.0 definition of the Resource Type and should be suitable...
for the conveyed value. All Property Names and Property Values defined in this document are case sensitive.

5.4.2.2 "range" Property
The "range" defines the valid range for the Property in the Resource as a two element array. This is either an integer or a number range. The first value in the array is the minimum value, the second value in the array is the maximum value.

5.4.2.3 "step" Property
The "step" defines the step value across the defined "range" as either an integer or a number. This is the increment for valid values across the range. For example, for the integer case if the "range" is 0..10 and "step" is 2 then valid values are 0,2,4,6,8,10; for the number case if the "range" is 0.0..10.0 and "step" is 2.5 then valid values are 0.0,2.5,5.0,7.5,10.0.

5.4.2.4 "precision" Property
When exposed the value in "precision" provides a +/- tolerance against the Properties in the Resource. Thus if a Property is UPDATED to a value and that Property then RETRIEVED, the RETRIEVED value is valid if in the range of the set value +/- precision.

5.4.3 Basic Resource Schema
All Resource Types defined herein are represented as previously noted by OpenAPI Specification 2.0 files.

5.4.4 CRUDN operation response codes
A Resource can be created or updated depending on the Resource Type definition and the allowed CRUDN operations. The operation may have different response codes with different meanings. This is explained in Table 4.

<table>
<thead>
<tr>
<th>Response Code</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>Payload of the response will confirm the change. The OpenAPI Specification 2.0 definition will contain a schema to define the payload.</td>
</tr>
<tr>
<td>201</td>
<td>Payload is the URL of the Resource that was created by the Server as a result of a CREATE operation. The OpenAPI Specification 2.0 definition will contain schema to define the payload.</td>
</tr>
<tr>
<td>204</td>
<td>Ok, everything went well, no payload provided. The OpenAPI Specification 2.0 definition does not contain a schema. The OpenAPI Specification 2.0 definition may even omit this value, since it is regarded as default behaviour of a Server.</td>
</tr>
<tr>
<td>403</td>
<td>Case 1: In the case of a RETRIEVE on a Resource with the use of a query parameter selecting specific Property values; if the Server does not support the values provided then this response should be returned. The response payload should include the allowed values for the query parameter. Case 2: The Server could not CREATE or UPDATE the Resource due to a problem with the provided payload. For an UPDATE, unless otherwise stated in the Resource Type definition, the response payload should</td>
</tr>
</tbody>
</table>
include the same schema defined for a 200; indicating the current Resource Property value(s).

5.5 Example Resource definitions

Please see the Resource Types in Clause 6 for examples of Resource Definitions. For an example Resource Type that models an actuator refer to the definition of Dimming; for an example Resource Type that models a sensor refer to the definition of an Illuminance Sensor.

5.6 Observable Resource Types

5.6.1 Introduction

ISO/IEC 30118-1 defines a mechanism by which Resources can advertise themselves as “Observable” to a Client. All Resource Types defined in this document may be observed. Whether or not a Resource Type is made observable via use of the Policy Link Parameter is entirely implementation dependent.

5.6.2 Conditional Notification

5.6.2.1 General

All observable Resources may apply conditions to the generation of notifications that result from the observe action, these conditions can be time based or value based or time and value based. This is achieved by composing the Conditional Notification (“oic.r.value.conditional”) Resource Type with an instance of an observable Resource; that is the Resource that is exposed by the Server has an "rt" of "[oic.r.<resource>“,“oic.r.value.conditional]”.

5.6.2.2 Conditional Notification Property summary

Table 5 summarizes the Properties provided by the Conditional Notification Resource Type. At least one Property from the table shall be present in an instance of the Resource Type.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>R/W</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>threshold</td>
<td>number</td>
<td>RW</td>
<td>No</td>
<td>Amount by which the observed value changes before a notification is generated</td>
</tr>
<tr>
<td>minnotifyperiod</td>
<td>integer</td>
<td>RW</td>
<td>No</td>
<td>Minimum elapsed time in ms before a notification may be sent</td>
</tr>
<tr>
<td>maxnotifyperiod</td>
<td>integer</td>
<td>RW</td>
<td>No</td>
<td>Maximum elapsed time in ms after which a notification is sent</td>
</tr>
</tbody>
</table>

All Properties if exposed shall be set with initial values. All Properties may be exposed with a value of "0" (zero); this indicates that the functionality associated with the Property is not active. Any Client may update the exposed values subject to any ACL restrictions; such changes are global and apply to all notifications that are sent to all observers. A notifier may reject an update to the Property values; in such cases a diagnostic payload should be included in the rejection response indicating the valid ranges for the Properties.

5.6.2.3 Property definition: threshold

Minimum value change between two notifications. A notification shall be sent (within the constraints of “minnotifyperiod”) when the change since the last notification is greater than or equal to this value. The measurement is done against the value in the last notification that was sent; thus all notifications (within any “maxnotifyperiod” constraints that may be present) will carry values that differ by at least “threshold”. A “threshold” value of “0” means that no “threshold” is applied.
5.6.2.4 Property definition: minnotifyperiod

Minimum time (in ms) that shall occur between notifications. If a value change condition is met ("threshold" equalled or exceeded or any change in value if threshold is not present) before expiration the notification shall not be sent till the period expires. If the Property is present and set to "0" then no minimum notify period timer is run; if the Property is present and with a value greater than "0" then a minimum notify period timer shall be run equal to the value. The Property value itself is initially populated by the notifier. If the Property is not present, the minimum notify period is up to the notifier. The timer shall be reset each time a notification is sent.

5.6.2.5 Property definition: maxnotifyperiod

Maximum time (in ms) that the notifier shall not exceed between notifications. When the timer expires a notification shall be sent. If present and set to “0” then no maximum notify period timer is run; if present and with a value greater than 0 then a maximum notify period timer shall be run equal to the value. The Property value itself shall be initially populated by the notifier. When both "minnotifyperiod" and "maxnotifyperiod" are present and both are non-zero the value of "maxnotifyperiod" shall be larger than the “minnotifyperiod”. If not present, the value shall be set by the notifier. The timer shall be reset each time a notification is sent.

5.6.2.6 Governing state machine

The "minnotifyperiod" and "maxnotifyperiod" timers are restarted each time a notification is sent (response to the Observe). A notification is sent when value change condition (threshold) and "minnotifyperiod" are both met if both are present. If the observed Property value subsequently drops beneath threshold before the expiration of "minnotifyperiod" the notifier may take no action or a notification may be sent on expiration of "minnotifyperiod" containing the current observed Property value (at the time of the notification). If there are no timer constraints; then notifications are sent whenever the observed Property value has changed by an amount greater than or equal to “threshold”.

Overall logic is defined in Figure 1. Figure 2 provides an illustrative sequence.

Figure 1 – Overall conditional notification logic
Composite Resource Types are Resources that comprises of one or more single or other composite Resource Types, an example of which is shown in Figure 3. The Composite Resource Type can be viewed upon as a new single Resource Type. The Composite Resource Type mechanism is a powerful concept since it uses existing Resource Types in a new combination to express more contexts to a Resource without specifying new single unit Resource Types.

Composite Resource Types are defined by linking the referenced existing Resource values in to a Collection.
The linking is done by using an array of Links; refer to ISO/IEC 30118-1 clause 7.8.2 for more details. Note that the example in Figure 3 contains a partial schema of this definition as it is for descriptive purpose only. The Property name of the array in the example is “resources”.

The contents of the listed Resources can be achieved in a single operation by using the ISO/IEC 30118-1 defined oic.if.b interface.

**Figure 3 – Composite Resource example**

### 5.8 Document version

Devices conformant to this document version shall add the string “ocf.res.1.3.0” to the dmv Property in "oic.wk.d". This Property is for legacy Device support only and will no longer be revised in alignment with document versions.

### 5.9 Data types

This document adopts the types defined in ISO/IEC 30118-1 with the exceptions defined in this clause.
All Properties in this document that are defined as JSON number type shall be transmitted encoded as floating point values and not integer values. Reception of Properties defined as JSON number type shall be as defined in ISO/IEC 30118-1. See ISO/IEC 30118-1 clause 12.4 for specifics.

6 Referenced Ecosystems

6.1 DALI

6.1.1 Overview

The DALI bus (reference IEC 62386) contains defined entities:

– Application controller (single or multi master)
– Control gear
– Input device

The communication is defined in forward frames (FF) or backward frames (BF). The FFs are either control commands or notifications, depending on the DALI device type on the system bus. The BF are responses on the FFs. Not all FFs will initiate a response, this depends on the DALI specification (IEC 62386). The FF and BF in DALI are represented as an array of bytes. The array length depends on the DALI command carried in the FF or BF.

All FFs are initiated by the application controller or being forwarded to the application controller by the input device. The DALI specification clause 4.4 indicates that there is no direct communication between the input device and the control gear. This is depicted in Figure 4.

![Diagram of DALI communication](image)

**Figure 4 – FFs are always handled by the application controller.**

The DALI FF/BF frames may be used in a unicast way (target to a specific DALI device) or multicast way to address a group of DALI devices. The FFs that are commands to multiple DALI devices are send on multicast on OCF level. These group of multicast FF commands have typical no response in normal operation. There is one exception in address commissioning where one or more devices might reply to a DALI Compare command. Three 8-bit integers are broadcast (SearchaddrH, SearchaddrM and SearchaddrL), followed by a DALI Compare command, a device that has an internal random 24bit number (created as a result of the Randomise command) that matches the 3x 8bits shall send 255 as a reply. This DALI process has a maximum lifetime of 15 minutes following the broadcast of a DALI Initialise command, these commands shall be ignored by devices outside the 15-minute window. More than one device may match the random 24bit integer and thus respond to the command. Note that these BF responses are dealt with on the DALI bus and will not be visible on the OCF communication level.

The FF commands that have a reply are typical unicast commands e.g., target to a single DALI device.
The "oic.r.dali" Resource Type will be used with UPDATE, the UPDATE request payload carries the DALI FF or BF. The FF and BF commands can’t be read back. The FFs and BFs are conveyed as Property Values in the OCF payload of this Resource.

There are two typical deployments: using OCF as a tunnel and using OCF as the DALI bus.

6.1.2 OCF as a tunnel

The tunnelling concept may be used to talk to a deployed DALI system. The frames to and from an application controller are transported by means of the "oic.r.dali" resource. The application controller that controls the DALI bus resides on one side of the OCF tunnel and the bus controller will reside on the other side of the OCF tunnel. This is depicted in Figure 5.

Figure 5 – OCF as Tunnel for the application controller frames

The DALI information is conveyed between the Device with a Device Type of "oic.d.dali.ac" and the Device with a Device Type of "oic.d.dali.bus". The Device with the "oic.d.dali.ac" Device Type constructs the DALI FF commands and interprets the DALI BF commands. This can be achieved without DALI hardware. This Device shall implement the OCF Resource with rt="oic.r.dali". The DALI bus controller (Device Type rt="oic.d.dali.bus") shall implement an OCF Resource with rt="oic.r.dali", it contains DALI technology (e.g. software and hardware) to talk to the connected DALI devices on the bus. See Table 6 for clarification. How the DALI technology is realized is out of scope of this document. The Resource with rt="oic.r.dali" is not a RESTful Resource; it conveys the FFs and BFs with the "oic.if.w" OCF Interface, e.g. the data can’t be read back. Note that there may be more than one DALI bus controller in the system; each with a different bus number (see Figure 6).
The DALI (FF/BF) command set is limited to a single DALI bus. The DALI bus has a limitation of the number of devices on a DALI bus, this due to addressing. To overcome this issue, the OCF layer has an extra Property to indicate different DALI busses in a deployment. This is achieved by having a DALI bus number on the DALI bus controller, this is realized in the "oic.r.dali.conf" Resource Type (see Table 9). The DALI address on the bus should represent the same information as the DALI address used in the FFs and BF.s. The "oic.r.dali" resource UPDATE operation may be used for a single DALI device (unicast) and for a set of DALI devices (multicast). When the operation is directed as multicast, a set of DALI busses may be indicated. This is achieved by having the target bus Property "tbus" implemented on the "oic.r.dali" Resource Type. This Property contains the list of DALI bus identifiers that should interpret and execute the sent FF command.

The application controller may build up a mapping between the OCF Devices and the DALI source address. However, it would be easier to have this info available at the OCF level so that all OCF Devices may use the OCF address instead of the DALI unicast address. When the DALI source address is configured, then the DALI device may populate this address in the DALI Resource. When the source address is not yet configured, the value "-1" shall be used to indicate that the value is not yet known because it is not yet assigned. The address is assigned during commissioning by a tool that may be on an application controller (software) or by an external commissioning device. This process involves more than just addressing; examples include items such as group membership, light levels for scenes and various defaults. There are a whole set of DALI commands to address devices on the DALI bus. Each OCF Device may get a bus number assigned by the

---

**Figure 6 – OCF as Tunnel multiple DALI busses**

**Table 6 – "oic.r.dali" Resource Type request and response definition**

<table>
<thead>
<tr>
<th>Device Type</th>
<th>Resources types</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>oic.d.dali.ac</td>
<td>&quot;oic.r.dali&quot;</td>
<td>Conveying DALI FF/BF</td>
</tr>
<tr>
<td>oic.d.dali.bus</td>
<td>&quot;oic.r.dali&quot;</td>
<td>Conveying DALI FF/BF</td>
</tr>
<tr>
<td></td>
<td>&quot;oic.r.dali.conf&quot;</td>
<td>bus configuration</td>
</tr>
</tbody>
</table>
application controller. The default bus number is "0". The UPDATE command conveying an FF instruction for multiple busses shall use the "tbus" Property to convey that this instruction is meant for multiple busses. If "tbus" is omitted from an UPDATE command conveying an FF command, the bus identified with "0" shall be used. Omitting the "tbus" command is analogous to a deployment of a single DALI bus with a bus number of 0.

The Device Type for the DALI bus controller shall have the Device Type "oic.d.dali.bus". The application controller shall have the Device Type "oic.d.dali.ac". Since the IP connection is not real time, the DALI instructions that are timing dependant e.g., commands using send-twice and priority, shall use OCF Properties ("st" and "prio") to convey that extra information. The DALI bus controller shall use this information to generate the correct command (e.g., repeat with the correct timing) on the DALI bus. In Figure 7 the input device and control gear are DALI devices, the application controller on the bus has an OCF and DALI implemented. The DALI messages are grouped in the figure as DALI bus commands.
Figure 7 – FFs initiated by the various actors.

The initiators of an FF are the DALI entities application controller and input device. The OCF handling of initiated FF frames are conveyed by the OCF UPDATE command. The UPDATE <SSM>/dali containing FF as payload.
command may be either a multicast command (secured with SSM) or a unicast command. As per DALI specification the input device FF is always directed to the DALI bus controller ("oic.d.dali.bus") which then forwards the command to the correct DALI entity on the DALI bus. This allows DALI FFs and BF to be communicated outside the DALI bus.

6.1.3 OCF as a DALI bus

The OCF as a bus concept (see Figure 8) may be used to talk to individual OCF Devices that implement the "oic.r.dali" Resource Type. Each OCF Device shall implement the DALI Resource Type "oic.r.dali", capable of interpreting the DALI command FFs and BFs (see Table 7). The frames to and from the application controller are transported by means of OCF UPDATE commands.

![Diagram of OCF as a DALI BUS](image)

**Figure 8 – OCF as a DALI BUS**

The DALI information is conveyed by an OCF Resource with rt="oic.r.dali". The operation is not a RESTful; it conveys the FFs and BFs. The Simple Secure Multicast feature (SSM) shall be used for sending the action UPDATE to all OCF Devices that contain the "oic.r.dali" Resource Type. The SSM feature is needed because the FFs initiated by any DALI device may be group commands. The initiators of FFs shall be SSM Clients, being capable of sending secure multicast messages. All recipients of FFs and BFs shall be SSM Servers. The OCF Endpoint of the "oic.r.dali" Resource shall indicate support of SSM.

Figure 9 illustrates the initiation of FFs by different actors in the ecosystem.

The Device Type for the input device and control gear DALI devices shall have the Device Type "oic.d.dali". The application controller will have the Device Type "oic.d.dali.ac".

7 Resource Type definitions

7.1 Introduction

This clause contains definitions for all Resource Types; the complete set is listed in Table 11 – Alphabetical list of Resource Types.

All Resource Types shall be created in accordance with ISO/IEC 30118-1 clause 7.4. All comparisons against a Resource Type shall be case insensitive.

All Resource Types in this document are prefixed with “oic.r” denoting that it is an OCF defined Resource Type.

### Air Flow

#### Introduction

This Resource describes Properties associated with air flow.

The Property "supporteddirections" is the set of valid values for the direction property for a particular instance of this Resource Type.

The Property "direction" is the directionality of the air flow if applicable, if Property "supporteddirections" is also present it must be a value from that set.

The values of Property "direction" are dependent on the capabilities of the unit.

The Property "speed" is an integer representing the current speed level for the unit.

The Property "range" is an array of the min,max values for the speed level. If not present the "range" defaults to [0,100].

Property "automode" is the status of the automode feature; Off means automode is not enabled, On means automode is active and the speed is automatically controlled by the Device.

#### Example URI

/AirFlowResURI

#### Resource type

The Resource Type is defined as: "oic.r.airflow".

7.3 Air Flow Control

7.3.1 Introduction

This Resource describes the attributes associated with control of air flow, for example as modelled by a Thermostat (fan), Room A/C or other device. The Resource is a Collection of:

- AirFlow Resource
- BinarySwitch Resource

7.3.2 Example URI

/AirFlowControlResURI

7.3.3 Resource type

The Resource Type is defined as: "oic.r.airflowcontrol".

7.3.4 OpenAPI 2.0 definition

7.4 Battery

7.4.1 Introduction

This Resource describes the attributes associated with a battery. The Property "charge" is an integer showing the current battery charge level as a percentage in the range 0 (fully discharged) to 100 (fully charged). The Property "capacity" represents the total capacity of battery in Amp Hours (Ah). The "charging" status and "discharging" status are represented by boolean values set to "true" indicating enabled and "false" indicating disabled. Low battery status is represented by a boolean value set to "true" indicating low charge level and "false" indicating otherwise, based upon the battery threshold represented as a percentage.

7.4.2 Example URI

/BatteryResURI

7.4.3 Resource type

The Resource Type is defined as: "oic.r.energy.battery".

7.4.4 OpenAPI 2.0 definition

**7.5 Binary Switch**

**7.5.1 Introduction**

This Resource describes a binary switch (on/off). The Property "value" is a boolean.
A value of 'true' means that the switch is on.
A value of 'false' means that the switch is off.

7.5.2 Example URI
/BinarySwitchResURI

7.5.3 Resource type
The Resource Type is defined as: "oic.r.switch.binary".

7.5.4 OpenAPI 2.0 definition

7.6 Brightness

7.6.1 Introduction

This Resource describes the brightness of a light or lamp. The Property "brightness" is an integer showing the current brightness level as a quantized representation in the range 0-100.

A brightness of 0 is the minimum for the resource.

A brightness of 100 is the maximum for the resource.

7.6.2 Example URI

/BrightnessResURI

7.6.3 Resource type

The Resource Type is defined as: "oic.r.light.brightness".

7.7 Colour Chroma

7.7.1 Introduction

This Resource describes the colour using chroma conventions. Properties are "hue", "saturation", "csc", and "ct". The Property "hue" is the hue angle, it is an integer value as defined by the CIECAM02 model definition (see reference [CIE CIE159:2004]). The Property "saturation" is an integer value as defined by the CIECAM02 model definition (see reference [CIE CIE159:2004]). The Property "maximumsaturation" is the upper bound on the saturation supported by the Device. If not present the maximum value for "saturation" is 32767. The Property "csc" is the colour space coordinates in CIE colour space. The first item in the array is the X coordinate. The second item in the array is the Y coordinate. The Property "nct" is the Mired colour temperature. The Resource provides the colour using chroma conventions.

7.7.2 Example URI

7.8 Colour RGB

7.8.1 Introduction

This Resource specifies the actual colour in the RGB space represented as an array of integers. Each colour value is described with a Red, Green, Blue component. These colour values are encoded as an array of integer values ([R,G,B]). The minimum and maximum colour value per component may be described by the Property "range". When "range" is omitted, then the "range" is [0,255].

7.8.2 Example URI

/ColourRGBResURI

7.8.3 Resource type

The Resource Type is defined as: "oic.r.colour.rgb".

7.9 Dimming
7.9.1 Introduction
This Resource describes a dimming function. The Property "dimmingSetting" is an integer showing the current dimming level. If Property "step" is present then it represents the increment between dimmer values. When the Property "range" is omitted, then the range is [0,100]. A value of 0 means total dimming; a value of 100 means no dimming.

7.9.2 Example URI
/DimmingResURI

7.9.3 Resource type
The Resource Type is defined as: "oic.r.light.dimming".

7.9.4 OpenAPI 2.0 definition

7.10 Door

7.10.1 Introduction

This Resource describes the open state of the door. A door is modelled by means of openState (Open/Closed), openDuration (ISO 8601 Time), and openAlarm (boolean). For Property "openState", the value 'Open' indicates the door is open. The value 'Closed' indicates the door is closed. The type of Property "openDuration" is an RFC Time encoded string. The Property "openAlarm" value 'true' indicates that the open alarm is active. The openAlarm value 'false' indicates that open alarm is not active. retrieves the state of the Door.

7.10.2 Example URI

7.11 Energy Consumption
7.11.1 Introduction
This Resource describes the energy consumed by the Device since power up (the energy value is in Watt Hours [Wh]) and the instantaneous power draw of the device (the power value is in Watts [W]) at the time the resource was queried.
The Property "power" value is in Watts [W].
The Property "energy" value is in Watt Hours [Wh].
The Resource provides the current power draw and cumulative energy usage.

7.13 Humidity

7.13.1 Introduction
This Resource describes a sensed or desired humidity. The Property "humidity" is an integer describing the percentage measured relative humidity. The Property "desiredHumidity" is an integer showing the desired target relative humidity.

7.13.2 Example URI
/HumidityResURI

7.13.3 Resource type
The Resource Type is defined as: "oic.r.humidity".

7.13.4 OpenAPI 2.0 definition

7.14 Ice Maker

7.14.1 Introduction
This Resource describes the operational state of an Ice Maker. The Property "status" is a string containing a value from the set of possible ice maker statuses. The possible statuses are defined by the enumeration ["on", "off", "full"] A status of "on" means that the Ice Maker is operating.
A status of "off" means that the Ice Maker is not operating.
A status of "full" means that the ice collection bin is full (Ice Maker is operating).

7.14.2 Example URI
/IceMakerResURI

7.14.3 Resource type
The Resource Type is defined as: "oic.r.icemaker".

7.14.4 OpenAPI 2.0 definition
```json

7.18 Open Level
7.18.1 Introduction
This Resource describes how open or ajar an entity such as a window, door, blind or shutter is. The Property "openLevel" can be read (acting as a sensor).
The "openLevel" can also be set (acting as an actuator). The "openLevel" is device dependent across the range provided. When the Property "range" is omitted then 0 to 100 is assumed where 0 means closed, 100 means fully open. If a "range" is provided then the lower bound=closed, upper bound=open. If Property "step" is present then it represents the increment between possible values; if not provided 1 is assumed.

7.18.2 Example URI

/OpenLevelResURI

7.18.3 Resource type

The Resource Type is defined as: "oic.r.openlevel".

7.19  Operational State

7.19.1  Introduction

This Resource describes the operational and job states on a device. The states can be read or set, setting indicates a desired state. A device may reject an attempt to set a state that would result in adverse operational characteristics. The Property "machineStates" is an array of the possible operational states. The Property "currentMachineState" is the current state of operation of the device. The Property "jobStates" is an array of the possible job states. The Property "currentJobState" is the currently active jobState. The Property "runningTime" is the ISO8601 encoded elapsed time in the current operational state. The Property "remainingTime" is the ISO8601 encoded time till completion of the current operational state. The Property "progressPercentage" is the percentage completeness of the current jobState.

7.20 Ramp Time

7.20.1 Introduction

This Resource that describes the ramp time of a dimming function. It specifies the actual speed of changing between 2 dimming values. The Property "ramptime" is specified in milliseconds [ms]. When range is omitted the maximum value is 100 ms. The ramp time of 0ms indicates the minimal delay possible by the implementation.

7.20.2 Example URI

/RampTimeResURI

7.20.3 Resource type

The Resource Type is defined as: "oic.r.light.ramptime".

7.20.4 OpenAPI 2.0 definition

7.21 Refrigeration

7.21.1 Introduction

This Resource describes a refrigeration function. The Property "filter" is a read-only value providing the percentage life time remaining for the water filter. The Property "rapidFreeze" is a boolean that controls the rapid freeze capability if present. The Property "rapidCool" is a boolean that controls the rapid cool capability if present. The Property "defrost" is a boolean that controls the defrost cycle if present. At least one of the listed Properties shall be present in a Resource Instance.

7.21.2 Example URI

7.22 Temperature

7.22.1 Introduction

This Resource describes a sensed or actuated Temperature value. The Property "temperature" describes the current value measured. The Property "units" is a single value that is one of "C", "F" or "K". It provides the unit of measurement for the "temperature" value. It is a read-only value that is provided by the server. If the "units" Property is missing the default is Celsius [C]. When the Property "range" is omitted the default is +/- MAXINT. A client can specify the units for the requested temperature by use of a query parameter. If no query parameter is provided the server provides its default measure or set value. It is recommended to return always the units Property in the result.

7.22.2 Example URI

/TemperatureResURI

7.22.3 Resource type

The Resource Type is defined as: "oic.r.temperature".

7.22.4 OpenAPI 2.0 definition

7.23 Time Period
7.23.1 Introduction
This Resource describes the time period over which any additionally provided information is derived or bounded.
The Property "startTime" and "stopTime" are RFC3339 encoded strings. The Property "startTime" must be present.
The interval is the interval of the time period in minutes, if present this value must be no less than 0 minute.
The intervalsecond is the interval of the time period in seconds, if present this value must be numerical zero or greater.
The repeat is the number of the time period's iteration, which means how many times to repeat the time period. The Property "repeat" accepts only negative one, numerical zero, and positive number. When this value is numerical zero, the time period will be repeated infinitely until a client makes it stop by inputting negative one for the value.
The Property "stopTime" and "interval" are mutually exclusive; both Properties cannot be present in a Resource instance.
The Property "intervalsecond" cannot be presented with the Property "stopTime". In case of both the Property "interval" and "intervalsecond" are presented together, the total time interval is the sum of "interval" and "intervalsecond".
The Property "triggertiming" describes a specific time to execute an action. This property must have one of the values among "startTime", "stopTime", and "totalInterval". The totalInterval means the sum of the Property "interval" and "intervalsecond". If one of the properties does not exist, the value of the unexpressed property is taken as a numerical zero.
The Property "state" describes a state of time interval. This property must have one of the values among "preInterval", "ininterval", and "postInterval".
The Resource defines a time period for information retrieval, action or other behaviour.

7.23.2 Example URI

7.24 Activity Count
7.24.1 Introduction
This Resource specifies an activity count. The Resource can be readonly (oic.if.s interface) in which instance it represents a count. The Resource can be readwrite (oic.if.a interface) in which instance it represents a goal or target for a count. The Property "count" is an integer representing either the current count or goal value.

7.24.2 Example URI
/ActivityCountResURI

7.24.3 Resource type
The Resource Type is defined as: "oic.r.sensor.activity.count".

7.24.4 OpenAPI 2.0 definition

7.25 Atmospheric Pressure Sensor

7.25.1 Introduction
This Resource provides a measurement of Mean Sea Level Pressure experienced at the measuring point expressed in millibars.
The Property "atmosphericPressure" is a float which describes the atmospheric pressure in hPa (hectoPascals).
Note that hPa and the also commonly used unit of millibars (mbar) are numerically equivalent.

7.25.2 Example URI
/AtmosphericPressureResURI

7.25.3 Resource type
The Resource Type is defined as: "oic.r.sensor.atmosphericpressure".

7.25.4 OpenAPI 2.0 definition

7.26 Audio Controls

7.26.1 Introduction

This Resource defines basic audio control functions.
The Property "volume" is an integer containing a percentage [0,100].
A volume of 0 (zero) means no sound produced.
A volume of 100 means maximum sound production.
The Property "mute" is implemented as a boolean.
A mute value of true means that the device is muted (no audio).
A mute value of false means that the device is not muted (audio).

7.26.2 Example URI

/AudioResURI

7.26.3 Resource type

The Resource Type is defined as: "oic.r.audio".

7.27 Auto Focus

7.27.1 Introduction

This Resource describes an auto focus on/off feature.
The Property "autoFocus" is a boolean.
An "autoFocus" value of 'true' means that the auto focus feature is on.
An "autoFocus" value of 'false' means that the auto focus feature is off.
Note that when Pan Tilt Zoom (see 'Pan Tilt Zoom' Resource definition) is used the autofocus works only in the selected area.

7.28 Automatic Document Feeder

7.28.1 Introduction

This Resource describes the state of an automatic document feeder, typically used with a scanner.

The Property "adfstates" and "currentAdfState" are read only.

The Property "adfStates" is an array of the possible operational states.

The Property "adfProcessing" is the OK state, other states are errors or require 'user attention'.

The currentAdfState is the current value of the ADF state on the device.

7.28.2 Example URI

/AutomaticDocumentFeederResURI

7.28.3 Resource type

The Resource Type is defined as: "oic.r.automaticdocumentfeeder".

7.28.4 OpenAPI 2.0 definition

7.32 Auto White Balance

7.32.1 Introduction

This Resource describes an auto balance on/off feature. The Property "autoWhiteBalance" is a boolean. An AutoWhiteBalance value of 'true' means that the auto white balance feature is on. An AutoWhiteBalance value of 'false' means that the auto white balance feature is off.

7.32.2 Example URI

/AutoWhiteBalanceResURI

7.32.3 Resource type

The Resource Type is defined as: "oic.r.colour.autowhitebalance".

7.32.4 OpenAPI 2.0 definition

7.33 Colour Saturation

7.33.1 Introduction
This Resource describes a Colour saturation value. The Property "colourSaturation" is an integer. A "colourSaturation" has a range of [0,100]. A "colourSaturation" value of 0 means producing black and white images. A "colourSaturation" value of 50 means producing device specific normal colour images. A "colourSaturation" value of 100 means producing device very full colour images.

7.33.2 Example URI
/ColourSaturationResURI

7.33.3 Resource type
The Resource Type is defined as: "oic.r.colour.saturation".

7.34 Contact Sensor
7.34.1 Introduction
This Resource describes whether a contact sensor has been tripped or not. Typical use case is in Security Systems detecting window or door open. The Property "value" is a boolean. A value of 'true' means that contact has been broken (open). A value of 'false' means that contact is in place (closed).

7.34.2 Example URI
/ContactResURI

7.34.3 Resource type
The Resource Type is defined as: "oic.r.sensor.contact".
7.34.4 OpenAPI 2.0 definition

7.35 Demand Response Load Control (DRLC).

7.35.1 Introduction
This Resource describes any to be applied or currently being applied DRLC signal. The Property "DRTyp" is the ApplianceLoadReductionType defined in Zigbee/HA Smart Energy Profile 2.0.
The Property "start" is a string containing an RFC3339 encoded start time.
The Property "duration" value is in minutes.
The Property "Override" indicates whether the consumer has overridden the request (true) or not (false).
The Resource provides the current DRLC action that is being applied.
A duration of 0 (zero) means that no DRLC is currently active.

7.35.2 Example URI
/DRLCResURI

7.35.3 Resource type
The Resource Type is defined as: "oic.r.energy.drlc".

7.36 Energy Overload/Circuit Breaker

7.36.1 Introduction

This Resource describes whether an energy overload detector/circuit breaker is currently tripped. The Property "value" is a boolean. A value of 'true' means that energy overload has been tripped. A value of 'false' means that energy overload has not been tripped.

7.36.2 Example URI

/EnergyOverloadResURI

7.36.3 Resource type

The Resource Type is defined as: "oic.r.energy.overload".

7.40.5 Property definition

Table 88 defines the Properties that are part of the "oic.r.sensor.illuminance" Resource Type.

<table>
<thead>
<tr>
<th>Property name</th>
<th>Value type</th>
<th>Mandatory</th>
<th>Access mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>rt</td>
<td>array: see schema</td>
<td>No</td>
<td>Read Only</td>
<td>The Resource Type.</td>
</tr>
</tbody>
</table>

Table 88 – The Property definitions of the Resource with type "rt" = "oic.r.sensor.illuminance".
illuminance | number | Yes | Read Only | The sensed luminous flux per unit area in lux.
--- | --- | --- | --- | ---
n | multiple types: see schema | No | Read Write |
id | multiple types: see schema | No | Read Write |
rangle | multiple types: see schema | No | Read Write |
if | array: see schema | No | Read Only | The OCF Interface set supported by this Resource.

### 7.40.6 CRUDN behaviour

Table 89 defines the CRUDN operations that are supported on the "oic.r.sensor.illuminance" Resource Type.

### 7.41 Magnetic Field Direction Sensor

#### 7.41.1 Introduction

This Resource describes the direction of the Earth's magnetic field at the observer's current point in space.

Typical use case includes measurement of compass readings on a personal device.

The Property "value" is an array containing Hx, Hy, Hz (in that order) each of which are floats. Each of Hx, Hy and Hz are expressed in A/m (Amperes per metre).

#### 7.41.2 Example URI

/MagneticFieldDirectionResURI

#### 7.41.3 Resource type

The Resource Type is defined as: "oic.r.sensor.magneticfielddirection".

#### 7.41.4 OpenAPI 2.0 definition

7.42 Media

7.42.1 Introduction

This Resource specifies the media types that an OCF Server supports. The resource is an array of media elements. Each element contains:

- A URL at which the specified media type can be accessed.
- A string array containing the definition of the media using SDP.
- Each entry in the sdp array is an SDP line.
- Each line shall follow the SDP description syntax as defined in the SDP specification.

The SDP specification can be found at http://tools.ietf.org/html/rfc4566.

7.42.2 Example URI

/MediaResURI
7.42.3 Resource type

The Resource Type is defined as: "oic.r.media".

### 7.43 Media Source

#### 7.43.1 Introduction

This Resource defines a single media source that exists on a device. The source can be an input source or output source, this resource is agnostic of that. The Property "sourceName" specifies a pre-defined media input or output (e.g. "HDMI", "DVI"). The Property "sourceNumber" is a label to specify the instance (e.g. "PC", "1"). The Property "sourceType" is an enumeration defining whether the source is audio, video or both. The Property "status" is a boolean that determines if the specific source instance is selected or not.

A status of true means that the source instance is selected.
A status of false means that the source instance is not selected.

#### 7.43.2 Example URI

/mediaSourceResURI

#### 7.43.3 Resource type

The Resource Type is defined as: "oic.r.mediasource".

7.47 Motion Sensor

7.47.1 Introduction

This Resource describes whether motion has been sensed or not. The Property "value" is a boolean. A value of 'true' means that motion has been sensed. A value of 'false' means that motion not been sensed.

7.47.2 Example URI

/MotionResURI

7.47.3 Resource type

The Resource Type is defined as: "oic.r.sensor.motion".

7.47.4 OpenAPI 2.0 definition

```json
{
    "swagger": "2.0",

7.50 Pan Tilt Zoom Movement

7.50.1 Introduction

This Resource specifies the pan tilt and zoom capabilities of a device. The Resource Type is dynamic and reflects whether the values apply to physical movement of the device or digital/virtual enhancements to the image. For physical movement the Resource Type is "oic.r.movement.ptz". For digital/virtual image enhancements the Resource Type is "oic.r.image.ptz". The Properties "pan" and "tilt" are specified in degrees. The Property "zoomFactor" is a value in the range 1-100 for linear (optical) zoom. The zoom factor is a value in the range \([1x, 2x, 4x, 8x, 16x, 32x]\) for digital zoom. If there is no zoom value to set the zoom factor shall be '1x'. The value 0 degrees means neutral, this is a vendor defined setting. Note that this resource also can be used to create an offset for physical movement. When that is the case, the Resource Type value is: "oic.r.movement.offset.ptz". Note that this resource also can be used to create an offset for image movement. When that is the case, the Resource Type value is: "oic.r.image.offset.ptz". When the Property "pan_range" value is omitted, then the range is \([-180.0, 180.0]\). When "pan" is not supported then the range shall be \([0.0, 0.0]\). When the Property "tilt_range" value is omitted, then the range is \([-180.0, 180.0]\). If "tilt" is not supported then the range shall be \([0.0, 0.0]\).

7.50.2 Example URI

/PanTiltZoomResURI

7.50.3 Resource type

The Resource Type is defined as: "oic.r.ptz".

7.50.4 OpenAPI 2.0 definition

7.52 Speech Synthesis-TTS

7.52.1 Introduction

This Resource may be created on the OCF Server that is capable of rendering speech by an OCF Client and allows the client to provide an SSML document with text to render or may be created on the OIC Server by some resident application. The audio rendered is at this stage local to the Server (i.e. not streamed). The utterance is an SSML document. The supportedLanguages is an array of the RFC5646 defined language tags that are supported. The supportedVoices is an SSML document fragment indicating the voices that are supported. Utterance in the example shall be a properly escaped (JSON rules) SSML document. An example:

"<?xml version="1.0" encoding="ISO-8859-1"?>

<speak version="1.1" xmlns="http://www.w3.org/2001/10/synthesis"

  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"

  xsi:schemaLocation="http://www.w3.org/2001/10/synthesis

http://www.w3.org/TR/speech-synthesis11/synthesis.xsd"

  xml:lang="en-US">
The title of the movie is:

"Monty Pythons The Meaning of Life"

which is directed by Terry Jones.

</speak>

#### 7.53 Touch Sensor

**7.53.1 Introduction**

This Resource describes whether a touch has been sensed or not.

The Property "value" is a boolean.

A value of 'true' means that touch has been sensed.

A value of 'false' means that touch not been sensed.

**7.53.2 Example URI**

/TouchResURI

**7.53.3 Resource type**

The Resource Type is defined as: "oic.r.sensor.touch".

**7.53.4 OpenAPI 2.0 definition**

```json

7.56 Acceleration Sensor

7.56.1 Introduction

This Resource provides a measure of proper acceleration (g force) as opposed to co-ordinate acceleration (which is dependent on the co-ordinate system and the observer). The Property "value" is a float which describes the acceleration experienced by the object in "g".

7.56.2 Example URI

/AccelerationResURI

7.56.3 Resource type

The Resource Type is defined as: "oic.r.sensor.acceleration".

7.57 Movement

7.57.1 Introduction

This Resource specifies linear movement.
The Property "movementSettings" is an array of strings containing possible movement values (e.g. spin, stop, left, right).
The Property "movement" is the currently selected movement value.
The Property "movementModifier" is a modifier to the movement value (e.g. "spin", "90")

7.57.2 Example URI

/MovementResURI

7.57.3 Resource type

The Resource Type is defined as: "oic.r.movement.linear".

7.60 Three Axis Sensor

7.60.1 Introduction

This Resource provides a representation of the measurement from a three-axis sensor. The Property “orientation” is an array of numbers representing x-plane, y-plane and z-plane values. The unit of measurement for each pane is ‘g’.

7.60.2 Example URI

/ThreeAxisResURI

7.60.3 Resource type

The Resource Type is defined as: "oic.r.sensor.threeaxis".

7.60.4 OpenAPI 2.0 definition

7.63 Geolocation

7.63.1 Introduction

This Resource describes the properties associated with the current geolocation coordinate. Geolocation is a geolocation coordinate data.

The Property "latitude" is a device's current Latitude coordinate (degrees).

The Property "longitude" is a device's current Longitude coordinate (degrees).

The Property "alt" is a device's current distance (metres) above or below 'local' sea-level.

The Property "accuracy" is the accuracy level of the latitude and longitude coordinates (metres).

The Property "altitudeAccuracy" is the accuracy level of the altitude coordinates (metres).

The Property "heading" is a direction of travel of device (degree).

The Property "speed" is a device's current velocity (metres per second).

**7.64 Height**

**7.64.1 Introduction**

This Resource describes the Properties associated with height of an object's physical size. The unit is a single value that is one of m, cm, ft or in. If the unit Property is missing the default is meters [m]. The unit Property is a read-only value that is provided by the server. When range is omitted the default is 0 to +MAXFLOAT.

**7.64.2 Example URI**

/HeightResURI

**7.64.3 Resource type**

The Resource Type is defined as: "oic.r.height".

7.66 Air Quality

7.66.1 Introduction

This Resource describes a qualitative or measured contaminant that can be used to infer Air Quality. The Property "valueType" indicates a qualitative or measured reading within the
contaminantvalue Property.
The Property "contaminantvalue" can contain the actual sensed value with units per contaminant type.
Qualitative is a representative value within the range provided where the minimum value is
minimum contamination and maximum value is maximum contamination for the specific contaminant.
The Property "contaminantvalue" contains the actual measured or qualitative level.
The Property "range" contains the allowed range for the value that is being reported.
If valueType is 'Measured' then the units for the contaminant types are as follows:
Methanol (also known as Formaldehyde): CH2O (ug/m^3),
Carbon Dioxide: CO2 (ppm),
Carbon Monoxide: CO (ppm),
Particulate Matter (less than 1 micron in diameter): PM1 (ug/m^3),
Particulate Matter (less than 2.5 microns in diameter): PM2.5 (ug/m^3),
Particulate Matter (less than 10 microns in diameter): PM10 (ug/m^3),
Volatile Organic Compounds: VOC (ug/m^3),
Ozone: 03 (ppm), Nitrogen dioxide: NO2 (ppm), Sulphur dioxide: SO2 (ppm)

        "description": "This Resource describes a qualitative or measured contaminant that can be used to infer Air Quality. The Property "valueType" indicates a qualitative or measured reading within the contaminantvalue Property. The Property "contaminantvalue" can contain the actual sensed value with units per contaminant type. Qualitative is a representative value within the range provided where the minimum value is minimum contamination and maximum value is maximum contamination for the specific contaminant. The Property "contaminantvalue" contains the actual measured or qualitative level. The Property "range" contains the allowed range for the value that is being reported. If valueType is 'Measured' then the units for the contaminant types are as follows: Methanol (also known as Formaldehyde): CH2O (ug/m^3), Carbon Dioxide: CO2 (ppm), Carbon Monoxide: CO (ppm), Particulate Matter (less than 1 micron in diameter): PM1 (ug/m^3), Particulate Matter (less than 2.5 microns in diameter): PM2.5 (ug/m^3), Particulate Matter (less than 10 microns in diameter): PM10 (ug/m^3), Volatile Organic Compounds: VOC (ug/m^3), Ozone: 03 (ppm), Nitrogen dioxide: NO2 (ppm), Sulphur dioxide: SO2 (ppm) ",

7.67 Air Quality Collection
7.67.1 Introduction
This resource describes a sensor that provides the qualitative or measured Air Quality. The resource is a collection of instances of oic.r.airquality detailing the individual exposed contaminant measures. There is one collection entry per contaminant type supported by the device. A device must expose at least one measured or qualitative value. Retrieves the current air quality.

7.67.2 Example URI
/AirQualityCollectionResURI

7.67.3 Resource type
The Resource Type is defined as: "oic.r.airqualitycollection, oic.wk.col".

### 7.68 Consumable

#### 7.68.1 Introduction

This Resource specifies a thing that can be consumed such as filter material, printer toner etc. The Property "typeofconsumable" is an enumeration defining the thing being consumed as defined by the Smart Home Device Specification. The Property "remaining" is an integer capturing the percentage remaining life. The Property "orderpercentage" is an integer capturing the percentage life at which replacement or replenishment is recommended by the manufacturer. The Property "url" is a string containing a URL at which further information may be obtained with respect to the consumable.
7.68.2  Example URI
/ConsumableResURI

7.68.3  Resource type
The Resource Type is defined as: "oic.r.consumable".

7.68.4  OpenAPI 2.0 definition

The OCF Interfaces supported by the target Resource

Resource Type of the target Resource

7.70 Delay Defrost

7.70.1 Introduction

This Resource describes the delay defrost function as defined by the US Energy Star Specifications.

See Energy Star Refrigerator Requirements Version 5 Section 4).

(https://www.energystar.gov/sites/default/files/specs//private/ENERGY%20STAR%20Final%20Version%205.0%20Residential%20Refrigerators%20and%20Freezers%20Program%20Requirements .pdf)

The Property "status" is a boolean indicating whether the function is on, if off then defrost is scheduled as part of normal device operation.

The Property "startTime" is an RFC3339 full-time encoded start time for the interval in which defrost shall not occur.

The Property "stopTime" is an RFC3339 full-time encoded stop time for the interval in which defrost shall not occur.

The Property "interval" with additional range restrictions is the time in minutes of the period that starts at starttime (if not present the default is 240).

The Properties "stopTime" and "interval" are mutually exclusive; they cannot both be present in a Resource instance.

7.70.2 Example URI

/DelayDefrostResURI

7.70.3 Resource type

The Resource Type is defined as: "oic.r.delaydefrost".

7.70.4 OpenAPI 2.0 definition

7.71 Eco Mode

7.71.1 Introduction

This Resource specifies the supported and currently active Eco Mode of a Device
The Resource is a derivative of the Mode Resource (oic.r.mode) with a restriction that the population of supported modes and modes Properties is restricted to the set of values: "disabled","enabled","notsupported".
The adminforced Property indicates that the value has been set by another party (e.g. via some offboard Smart Energy interaction)

7.71.2 Example URI

/EcomodeResURI
7.71.3 Resource type

The Resource Type is defined as: "oic.r.ecomode".

7.72 Heating Zone

7.72.1 Introduction

This Resource provides information about the status of a (single) heating zone of a Cook-Top. It describes the case of a Cook-Top whose zones can be activated dynamically (i.e. the device implements pot recognition). The Property “maxheatinglevel” defines the max level for the heating zone. The Property “heatinglevel” is the current heating level of the zone. For each element, the value range is from 0 (indication that the zone is not heating) to "maxheatinglevel".

7.72.2 Example URI

/HeatingZoneResURI

7.72.3 Resource Type

The Resource Type is defined as: "oic.r.heatingzone".

7.73 Heating Zone Collection

7.73.1 Introduction

This Resource provides information about the status of the heating zones of a Cook-Top. It describes the case of a Cook-Top whose zones can be activated dynamically (i.e. the device implements pot recognition). The resource is a Collection of instances of oic.r.heatingzone detailing the individual cooktop zones

Retrieves the current heating zone information.

7.73.2 Example URI

/HeatingZoneResURI

7.73.3 Resource type

The Resource Type is defined as: "oic.r.heatingzonecollection, oic.wk.col".

7.74 Selectable Levels

7.74.1 Introduction

This Resource provides a set of device defined levels that can be selected for an operation. For example where a humidifier has a discrete set that model different humidity levels that can be set.

The Property "availablelevels" is an array of the levels that can be selected, these can be a number or an integer (as subset of integer).

The Property "targetlevel" is the level that has currently been selected and is written to in order to select a new level.

When retrieved the targetlevel provides the actual value that has been selected.

7.74.2 Example URI

/SelectableLevelsResURI

7.74.3 Resource type

The Resource Type is defined as: "oic.r.selectablelevels".

**7.75 Value Conditional**

**7.75.1 Introduction**

This Resource specifies conditions that can be applied to an observed value in any Resource. These conditions are applied by the OCF Server exposing the Resource to any generated notifications because of subscriptions to the Resource.

A unicast RETRIEVE to the Resource will receive the most recent value; which may not be the most recent notified value.

An OCF Server exposes this Resource in association with the Resource conveying the observed value.

This is done by means of a new Resource instance with an RT of "["oic.r.<thing being observed>", "oic.r.value.conditional"], e.g ["oic.r.temperature", "oic.r.value.conditional"].

The Property "threshold" is the amount by which the thing being observed must change before a notification is sent.

The Property "minnotifypertime" is the minimum time in ms (milliseconds) that must elapse before a notification is sent.

If the maxnotifypertime (time in ms (milliseconds)) elapses then a notification must be sent.

The Property "maxnotifypertime" is a timer that resets each time a notification is sent.

A value of '0' for any of "threshold", "minnotifypertime" or "maxnotifypertime" means that the capability is supported but not active.

**7.75.2 Example URI**

/ValueConditionalResURI

**7.75.3 Resource type**

The Resource Type is defined as: "oic.r.value.conditional".

7.76 Colour Space Coordinates

7.76.1 Introduction

This Resource describes the colour using colour space co-ordinates. The Property "csc" is the colour space coordinates in CIE colour space.

The first item in the array is the X coordinate.
The second item in the array is the Y coordinate.

If the Property "precision" is provided it applies to both the X and Y coordinates.

The Resource provides the colour using colour space coordinates.

7.76.2 Example URI

/example/ColourSpaceCoordinatesResURI

7.76.3 Resource type

The Resource Type is defined as: "oic.r.colour.csc".

7.76.4 OpenAPI 2.0 definition

7.77 Colour Temperature

7.77.1 Introduction

This Resource describes the colour using colour temperature conventions. The Property "ct" is the Mired colour temperature. The equivalent value in Kelvin is obtained by Colour Temp(K) = 1,000,000/Colour Temp(Mired) THe Resource provides the colour using colour temperature conventions.

7.77.2 Example URI

/example/ColourTemperatureResURI

7.77.3 Resource type

The Resource Type is defined as: "oic.r.colour.colourtemperature".

### 7.78 Colour Hue and Saturation

#### 7.78.1 Introduction

This Resource describes the colour using hue-saturation conventions. The Property "hue" is the hue angle, it is a number value as defined by the CIECAM02 model definition (see reference [CIE CIE159:2004]).

A Device that does not support fractional hue angles can provide integer values. If Property "precision" is provided it applies to the hue angle.

The Property "saturation" is an integer value as defined by the CIECAM02 model definition (see reference [CIE CIE159:2004]).

The Property "saturation" can be converted to a percentage by saturation/maximumsaturation X 100; where maximumsaturation is 32767 if the Property itself is not present.

The Property "maximumsaturation" is the upper bound on the saturation supported by the Device. If not present the maximum value for saturation is 32767.

The Resource provides the colour using hue and saturation conventions.

#### 7.78.2 Example URI

/example/ColourHueSaturationResURI

#### 7.78.3 Resource type

The Resource Type is defined as: "oic.r.colour.hs".

7.79.6 CRUDN behaviour
Table 167 defines the CRUDN operations that are supported on the "oic.r.batterymaterial" Resource Type.

7.80 Brewing
7.80.1 Introduction
This Resource describes the attributes associated with brewing. This resource is used for configuration only. The Operation of the Device is handled independently of this Resource. The amount requested is in ml. The strength of a brewed drink is an integer, the range of which may be enforced by the presence of a strengthrange Property.
7.80.2  Example URI
/BrewingResURI

7.80.3  Resource type
The Resource Type is defined as: "oic.r.brewing".

7.81 Energy
7.81.1 Introduction
This Resource describes the attributes associated with electrical energy. This Resource can be used for either rated (read-only), desired (read-write) or measured (read-only) energy. The Property "voltage" is in Volts (V), The Property "current" in Amps (A), and The Property "frequency" is in Hertz (Hz).

7.81.2 Example URI
/EnergyResURI

7.87 Time Stamp

7.87.1 Introduction

This Resource describes Properties associated with a timestamp. The "timestamp" Property is a string that captures a timestamp using the RFC3339 datetime format (e.g: 2007-04-05T14:30Z) (Time+Date+Timezone).

7.87.2 Example URI

/TimeStampResURI

7.87.3 Resource type

The Resource Type is defined as: "oic.r.time.stamp".

7.88 3D Printer

7.88.1 Introduction

This Resource describes the attributes associated with 3D Printer. The type of 3D printing technology is specified by an enumerated string value. The maximum sizes in mm are included for the x, y, and z dimensions. A designation of whether the device is capable of WAN connectivity is represented in a boolean. The memory capacity is captured in MB.

7.88.2 Example URI

7.89 Blood Pressure

7.89.1 Introduction
This Resource describes the Properties associated with a person's blood pressure. The unit is a single value that is one of mmHg or kPa. If the unit Property is missing the default is a millimeter of mercury [mmHg]. The bloodpressure and unit Properties are read-only values that are provided by the Server. When range is omitted the default is 0 to +MAXFLOAT.

7.89.2 Example URI

7.91 Body Mass Index(BMI)

7.91.1 Introduction
This Resource describes the Properties associated with a person's Body Mass Index (BMI). The unit, which is the default unit, is kg/m^2.
The bmi and unit Properties are read-only values that are provided by the server.
When range is omitted the default is 0 to +MAXFLOAT.

7.91.2 Example URI
/BMIResURI

7.91.3 Resource type
The Resource Type is defined as: "oic.r.bmi".

7.91.4 OpenAPI 2.0 definition

### 7.92 Body Fat

#### 7.92.1 Introduction
This Resource describes the Properties associated with a person's body fat. The unit is a single value that is one of kg, lb or percent.
If the unit Property is missing the default is kilograms [kg].
The bodyfat and unit Properties are read-only values that are provided by the Server.
When range is omitted the default is 0 to +MAXFLOAT.

#### 7.92.2 Example URI

/BodyFatResURI

#### 7.92.3 Resource type

The Resource Type is defined as: "oic.r.body.fat".

#### 7.92.4 OpenAPI 2.0 definition

7.93 Body Fat Free Mass

7.93.1 Introduction

This Resource describes the Properties associated with a person's body fat free mass. The unit is a single value that is one of kg, lb or percent. If the unit Property is missing the default is kilograms [kg]. The ffm and unit Properties are read-only values that are provided by the Server. When range is omitted the default is 0 to +MAXFLOAT.

7.93.2 Example URI

/BodyFatFreeMassResURI

7.93.3 Resource type

The Resource Type is defined as: "oic.r.body.ffm".

7.93.4 OpenAPI 2.0 definition

7.95 Body Scale Atomic Measurement

7.95.1 Introduction
This Resource describes the Properties associated with body scale. The Resource is an Atomic Measurement of weight (oic.r.weight), body mass index (BMI) (oic.r.bmi), height (oic.r.height), body fat (oic.r.body.fat), body water (oic.r.body.water), body soft lean mass (oic.r.body.slm), body fat free mass (oic.r.body.ffm), observed time (oic.r.time.stamp), and user id (oic.r.userid).

7.95.2 Example URI
/BodyScaleAMResURI

7.95.3 Resource type
The Resource Type is defined as: "oic.r.bodyscale-am, oic.wk.atomicmeasurement".

7.96  Body Soft Lean Mass

7.96.1  Introduction

This Resource describes the Properties associated with a person's body soft lean mass. The unit is a single value that is one of kg, lb or percent. If the unit Property is missing the default is kilograms [kg]. The slm and unit Properties are read-only values that are provided by the Server. When range is omitted the default is 0 to +MAXFLOAT.

7.96.2  Example URI

/BodySoftLeanMassResURI

7.96.3  Resource type

The Resource Type is defined as: "oic.r.body.slm".

7.97 Body Thermometer Atomic Measurement

7.97.1 Introduction

This Resource describes the Properties associated with body thermometer. The Resource is an Atomic Measurement of temperature (oic.r.temperature), body location for temperature (oic.r.body.location.temperature), observed time (oic.r.time.stamp), and user id (oic.r.userid).

7.97.2 Example URI

/BodyThermometerAMResURI

7.97.3 Resource type

The Resource Type is defined as: "oic.r.bodythermometer-am, oic.wk.atomicmeasurement".

7.97.4 OpenAPI 2.0 definition

### 7.98 Body Water

#### 7.98.1 Introduction

This Resource describes the Properties associated with a person's body water. The unit is a single value that is one of kg or lb. If the unit Property is missing the default is kilograms [kg]. The bwater and unit Properties are read-only values that are provided by the Server. When range is omitted the default is 0 to +MAXFLOAT.

#### 7.98.2 Example URI

/BodyWaterResURI
7.98.3 Resource type
The Resource Type is defined as: "oic.r.body.water".

7.100 Context Carbohydrates for Glucose Meter

7.100.1 Introduction

This Resource describes the Properties associated with a context carbohydrates. The carb Property has a default unit of grams[g]. The carb and meal Properties are read-only values that are provided by the Server. When range is omitted the default is 0 to +MAXFLOAT.

7.100.2 Example URI

/GlucoseCarbResURI

7.100.3 Resource type

The Resource Type is defined as: "oic.r.glucose.carb".

7.104 Context Meal for Glucose Meter

7.104.1 Introduction

This Resource describes the Properties associated with context meal. Preprandial means pre-meal. Postprandial means post-meal. Fasting means the effect of long-term absence of food intake (overnight). The meal Property is a read-only value that is provided by the Server.

7.104.2 Example URI

/GlucoseMealResURI

7.104.3 Resource type

The Resource Type is defined as: "oic.r.glucose.meal".

7.105 Context Medication for Glucose Meter

7.105.1 Introduction
This Resource describes the Properties associated with context medication. The unit is a single value that is one of mg and mL. The medication Property has a default unit of milligrams[mg]. The medication, unit and regimen Properties are read-only values that are provided by the Server. When range is omitted the default is 0 to +MAXFLOAT.

7.106 Glucose Meter Atomic Measurement

7.106.1 Introduction

This Resource describes the Properties associated with glucose meter. The Resource is an Atomic Measurement of glucose (oic.r.glucose), context carbohydrates (oic.r.glucose.carb), context exercise (oic.r.glucose.exercise), Hemoglobin Bound to glucose a1c Form (HbA1c) (oic.r.glucose.hba1c), context health (oic.r.glucose.health), context meal (oic.r.glucose.meal), context medication (oic.r.glucose.medication), context sample location (oic.r.glucose.samplelocation), context tester (oic.r.glucose.tester), observed time (oic.r.time.stamp), and user id (oic.r.userid).

7.106.2 Example URI

7.106.7 Context Sample Location for Glucose Meter

7.107.1 Introduction

This Resource describes the Properties associated with context sample Location. AST means Alternative Site Test specifying that the location of test performed was from an alternative site on the body.

The samplelocation Property is a read-only value that is provided by the Server.

7.107.2 Example URI

/glucoseSampleLocationResURI

7.107.3 Resource type

The Resource Type is defined as: "oic.r.glucose.samplelocation".

7.107.4 OpenAPI 2.0 definition

7.109 Optical RFID Station

7.109.1 Introduction

The Property "process" represents the stage of the product in the product line which has an optical RFID tag on its body.

The Property "event" is represented by a Boolean value set to "true" and "false" alarming the issue when additional action is requested for the tagged product.

The Property "actionrequest" represent necessary actions like the isolation of the product, to send the product back to other specific line to modify or fix the issue.

7.109.2 Example URI

/orFIDStationResURI

7.109.3 Resource type

The Resource Type is defined as: "oic.r.orfid.station".

7.111 PowerSource

7.111.1 Introduction

This Resource list the available power sources for the Device. The Property "powersources" is a list that is read only and is informative only. The Property "active" indicates the currently active power source from the provided list.

If there is more than 1 power source active, use multiple Resources to indicate the active power sources. If the active power source is unknown use the value "unknown".

7.111.2 Example URI

/PowerrSourceResURI
7.111.3 Resource type
The Resource Type is defined as: "oic.r.powersource".

7.114 Sensor Properties

7.114.1 Introduction

This Resource describes the properties which guide the reporting of a state change of a Sensor. The Property "silenttime" represents the period after which a state change report was sent where the state change is not reported. The Property "sensitivity" represents the level at which the sensor detects a state change. These values are completely dependent on the type of Sensor and the manufacturer capability, so no restrictions are used. The Properties "range", "step" and "precision" are only applied to the "sensitivity" Property.
7.114.2 Example URI
/SensorPropsResURI

7.114.3 Resource type
The Resource Type is defined as: "oic.r.sensor.props".

7.116 Calorific Value
7.116.1 Introduction
This Resource describes Properties associated with the energy associated with the consumption of different fuels (including natural gas).
The calorific value is a number the calorific value is a measure of the available heat energy, used as part of the calculation to convert a volume of a fuel (e.g. m3) to an energy value (e.g. KWh).

7.117 Conversion Factor

7.117.1 Introduction
This Resource describes Properties associated with the energy associated with the consumption of different fuels (including natural gas). The conversion factor is a number used as part of the calculation to convert gas volume to gas energy. The value used for this calculation is generally defined by local regulations and the conversion factor resource is therefore configurable. Provides the conversion factor used/required as part of the calculation to convert from fuel volume (m3) to fuel energy (kWh).

7.117.2 Example URI

7.118 Gas Consumption

7.118.1 Introduction

This Resource describes Properties associated with the energy associated with the consumption of natural gas
The gas value is in kilowatt hours [kWh].
The volume value is in metres cubed [m3].
Provides the cumulative gas energy, the cumulative gas volume and the calorific value and conversion factor used/required to convert from gas volume (m3[TB1]) to gas energy (KWh).

7.119 Gas Usage

7.119.1 Introduction

This Resource describes a cumulative time-based gas usage query. The Resource is a Collection of:
- TimePeriod Resource
- Gas Consumption Resource

7.119.2 Example URI

/GasUsageResURI

7.119.3 Resource type

The Resource Type is defined as: "oic.r.gas.usage".

7.119.4 OpenAPI 2.0 definition

### 7.120 Impact Sensor

#### 7.120.1 Introduction

This Resource provides a status and properties of an impact sensor. Included is the current status (boolean), horizontal and vertical direction (in degrees) and impact level (g force).

#### 7.120.2 Example URI

/ImpactSensorResURI

#### 7.120.3 Resource type

The Resource Type is defined as: "oic.r.impactsensor".

#### 7.120.4 OpenAPI 2.0 definition

7.124 IAS Zone Info

7.124.1 Introduction

This Resource describes information associated with an Intruder Alert System (IAS) Zone. Zone Type provides the information about the type of device/alarm. Zone Status provides an array which has 10 items representing various status information (e.g., battery status, mode, alarm (Up to two), supervision of IAS network, etc.).

A Device implementing this Resource can be enrolled to IAS Control and Indicator Equipment (CIE). IAS CIE can allocate an ID for the Device and update this Resource on the Device. This Resource may provide multiple sensitivity levels (>2). NumberofZoneSensitivityLevelSupported provides the number of the levels. A specific level can be selected as currentzonesensitivityLevel.

7.124.2 Example URI

/IASZoneInfoResURI

7.124.3 Resource type

The Resource Type is defined as: "oic.r.iaszoneinfo".

### 7.126 Window Covering

#### 7.126.1 Introduction

This Resource describes the information of a window covering, i.e., type, configuration status, and mode. Velocity associated with lifting the window covering can be changed by updating Lift_Velocity(cm/sec). Ramp up/down times to reaching the velocity setting can be changed by updating Lift_Acceleration Time/Lift_Deceleration Time (0.1sec).

#### 7.126.2 Example URI

/WindowCoveringResURI

#### 7.126.3 Resource type

The Resource Type is defined as: "oic.r.windowcovering".

### 7.127 Activity

#### 7.127.1 Introduction

This Resource describes the Properties associated with a person's physical activity. All Properties are read-only values that are provided by the server. When range (from "oic.r.baseresource") is omitted the default is 0 to $+\text{MAXFLOAT}$.

#### 7.127.2 Example URI

/ActivityResURI

#### 7.127.3 Resource type

The Resource Type is defined as: "oic.r.activity".

7.129 Alarm

7.129.1 Introduction

This Resource describes the Properties associated with alarm status.

7.129.2 Example URI

/AlarmResURI

7.129.3 Resource type

The Resource Type is defined as: "oic.r.alarm".

7.129.4 OpenAPI 2.0 definition

7.130 Continuous Glucose Meter (CGM) Atomic Measurement Representation

7.130.1 Introduction

This Resource describes the Properties associated with Continuous Glucose Meter. The Resource is an Atomic Measurement of glucose ("oic.r.glucose"), sensor ("oic.r.cgm.sensor"), observed time ("oic.r.time.stamp"), and user ID ("oic.r.userid").

7.130.2 Example URI

/ContinuousGlucoseMeterAMResURI

7.130.3 Resource type

The Resource Type is defined as: "oic.r.cgm-am, oic.wk.atomicmeasurement".

7.130.4 OpenAPI 2.0 definition

7.136 Heart Rate

7.136.1 Introduction

This Resource describes the Properties associated with a person's heart rate.

The unit, which is the default unit, is bpm.

The heartrate Property is a read-only value that is provided by the server.

When range (from: “oic.r.baseresource”) is omitted the default is 0 to +MAXFLOAT.

7.136.2 Example URI

/HeartRateResURI

7.136.3 Resource type

The Resource Type is defined as: "oic.r.heartrate".

7.136.4 OpenAPI 2.0 definition

7.138 Pulsatile Characteristic for Pulse Oximeter

7.138.1 Introduction

This Resource describes the Properties associated with a pulsatile characteristic of the pulsative wave of a Pulse Oximeter.

The characteristic Property is a read-only value that is provided by the server.

When range (from "oic.r.baseresource") is omitted the default is 0 to +MAXFLOAT.

7.138.2 Example URI

/PulsatileCharacteristicResURI

7.138.3 Resource type

The Resource Type is defined as: "oic.r.pulsatilecharacteristic".

7.140 Pulse Oximeter Atomic Measurement Representation

7.140.1 Introduction

This Resource describes the Properties associated with Pulse Oximeter. The Resource is an Atomic Measurement of SpO2 ("oic.r.spo2"), pulse rate ("oic.r.pulserate"), pulsatile characteristic ("oic.r.pulsatilecharacteristic"), pulsatileoccurrence ("oic.r.pulsatileoccurrence"), observed time ("oic.r.time.stamp"), and user ID ("oic.r.userid").

7.140.2 Example URI

/PulseOximeterAMResURI

7.140.3 Resource type

The Resource Type is defined as: "oic.r.pulseoximeter-am, oic.wk.atomicmeasurement".

7.141 Sleep

7.141.1 Introduction

This Resource describes the Properties associated with Sleep. Sleep shows the time spent in each of the sleep stages (awake, nrem1, nrem2, nrem3, nrem4, rem, light sleep, deep sleep), along with a sleep score indicating the quality of sleep.

7.141.2 Example URI

/SleepResURI

7.141.3 Resource type

The Resource Type is defined as: "oic.r.sleep".

7.141.4 OpenAPI 2.0 definition

#### 7.142 Sleep Monitor Atomic Measurement Batch Representation

#### 7.142.1 Introduction

This Resource describes the Properties associated with Sleep Monitor. The Resource is an Atomic Measurement of sleep (oic.r.sleep). Sleep shows the time spent in each of the sleep stages (awake, nrem1, nrem2, nrem3, nrem4, rem, light sleep, deep sleep), along with a sleep score indicating the quality of sleep.

#### 7.142.2 Example URI

/SleepMonitorAMResURI

#### 7.142.3 Resource type

The Resource Type is defined as: "oic.r.sleepmonitor-am, oic.wk.atomicmeasurement".

### 7.143 SpO2 for Pulse Oximeter

#### 7.143.1 Introduction

This Resource describes the Properties associated with a person's blood oxygen saturation level. The spo2 and perfusion Properties are read-only value that is provided by the server. When range (from "oic.r.baseresource") is omitted the default is 0 to +MAXFLOAT.

#### 7.143.2 Example URI

/SpO2ResURI

#### 7.143.3 Resource type

The Resource Type is defined as: "oic.r.spo2".

#### 7.143.4 OpenAPI 2.0 definition

7.146 Cycling Power

7.146.1 Introduction

This Resource describes the cycling power, which is the amount of energy transferred or converted per unit time.

The unit, which is the default SI unit, is W (which is equal to one joule per second).

The power Property is a read-only value that is provided by the server.

When range (from "oic.r.baseresource") is omitted the default is 0 to +MAXFLOAT.

7.146.2 Example URI

/CyclingPowerResURI

7.146.3 Resource type

The Resource Type is defined as: "oic.r.cyclingpower".

7.149 Speed

7.149.1 Introduction

This Resource describes the speed of an object, which is the magnitude of its velocity. The unit, which is the default SI unit, is metre per second. The speed Property is a read-only value that is provided by the server. When range (from "oic.r.baseresource") is omitted the default is 0 to +MAXFLOAT.

7.149.2 Example URI

/SpeedResURI

7.149.3 Resource type

The Resource Type is defined as: "oic.r.speed".

## 7.150 Torque

### 7.150.1 Introduction

This Resource describes the torque, which is the rotational equivalent of linear force. The unit, which is the default SI unit, is N\*m (Newton metre). The torque Property is a read-only value that is provided by the server. When range (from "oic.r.baseresource") is omitted the default is 0 to +MAXFLOAT.

7.151 Water Info

7.151.1 Introduction

This Resource describes the water information to indicate type of water currently provided by the device. The water type can be read or set.

The Property "supportedwatertypes" is an array of the possible water types are defined by the enumeration ["cold", "hot", "ambient", "ice"].

The Property "supportedadditivetypes" is an array of the possible additive types for water.
additive types mean optional types that can be added to the specific water type according to Client's preference and are defined by the enumeration ["none", "soda", "mineral"]. If absent, the default value is "none".
The Property "currentwatertype" is the currently desired water type. The Property "currentadditivetypes" is the currently desired additive type(s).
For example, if "cold" is selected with the "currentwatertype", "soda" and "mineral" or both can be selected as "currentadditivetypes". Note that if "hot" is selected with the "currentwatertype", "soda" and "mineral" may be restricted for the "currentadditivetypes".

7.151.2 Example URI
/WaterInfoResURI

7.151.3 Resource type
The Resource Type is defined as: "oic.r.waterinfo".

7.152 Deodorization
7.152.1 Introduction
This Resource describes a deodorization function, which can be supported by controlling on air filter.

The Property "mode" is a mode of the deodorization function. The supported modes are defined by the enumeration ["off", "on", "auto"].

"off" means that the deodorization function is not enabled.
"on" means that the deodorization function is active.
"auto" means that the deodorization function is automatically controlled depending on sensed air condition in the device inside.

The Property "currentstate" is the current state of the deodorization function. In the case of "auto"
mode, if the sensed air condition is determined to be bad, the function will be "on". Then, "mode" value is "auto" and "currentstate" value is "on". If not, the function is remaining "off" state. Then, "currentstate" value is "off".

7.153 KeyCard Switch

7.153.1 Introduction

This Resource describes the operation of a KeyCard style switch. It has one mandatory Property, "stateofcard", which is a string enum type. It has two enum values: "validCardInserted", "validCardNotInserted". "validCardInserted" means that a keycard was inserted and passed validation check. "validCardNotInserted" means that a keycard is not inserted or it was inserted but failed to pass validation check.

7.153.2 Example URI

/KeyCardSwitchResURI

7.153.3 Resource type

The Resource Type is defined as: "oic.r.keycardswitch".

7.154 Muscle Oxygen Saturation

7.154.1 Introduction

This Resource describes the muscle oxygen saturation (SmO2), which is the percentage of hemoglobin that is saturated with oxygen in the capillaries of a muscle. The unit is percentage. The smo2 Property is a read-only value that is provided by the server.

7.154.2 Example URI

7.155 Body Composition Analyser Atomic Measurement

7.155.1 Introduction

This Resource describes the Properties associated with body composition analyser. The Resource is an Atomic Measurement of weight (oic.r.weight), body mass index (BMI) (oic.r.bmi), height (oic.r.height), body fat (oic.r.body.fat), body water (oic.r.body.water), body soft lean mass (oic.r.body.slm), body fat free mass (oic.r.body.ffm), observed time (oic.r.time.stamp), and user id (oic.r.userid).

7.155.2 Example URI

7.156 Fault Interrupter Switch

7.156.1 Introduction

This Resource describes a fault interrupter switch (on/off/faulted). The Property "state" is an enum. A state of "on" means that the switch is on. A state of "off" means that the switch is off. A state of "faulted" means the switch is faulted, in such a state an UPDATE is not possible.

7.156.2 Example URI

/FaultSwitchResURI

7.156.3 Resource type

The Resource Type is defined as: "oic.r.switch.fault".

7.156.4 OpenAPI 2.0 definition

7.157 HVAC Capacity

7.157.1 Introduction
This Resource describes the capacity (heating or cooling) of a HVAC system. "capacity" is a number in units of kW (kilowatts). To convert from kW to other units that may be commonly used in certain geographic locales the following conversions should be applied:
- to convert to BTU/hr: BTU/hr = 3412.142 * kW
- to convert to ton: ton = kW/3.5168525

7.157.2 Example URI
/HVACCapacityResURI

7.157.3 Resource type
The Resource Type is defined as: "oic.r.hvac.capacity".

7.157.4 OpenAPI 2.0 definition

7.158 Media Audio Resource Type

7.158.1 Introduction

This OCF Resource specifies the audio media types that an OCF Device supports.

7.158.2 Example URI

/MediaAudioResURI

7.158.3 Resource type

The Resource Type is defined as: "oic.r.media.audio".

7.160 Media Image Resource Type

7.160.1 Introduction

This OCF Resource specifies the image media types that an OCF Device supports.

7.160.2 Example URI

/MediaImageResURI

7.160.3 Resource type

The Resource Type is defined as: "oic.r.media.image".

7.160.4 OpenAPI 2.0 definition

7.161 Media Text Resource Type
7.161.1 Introduction
This OCF Resource specifies the text media types that an OCF Device supports.

7.161.2 Example URI
/MediaTextResURI

7.161.3 Resource type
The Resource Type is defined as: "oic.r.media.text".

7.161.4 OpenAPI 2.0 definition

### 7.163 Restricted Switch

#### 7.163.1 Introduction

This Resource describes a switch (on/off) restricting UPDATE for 'on'.

The Property "state" is a Boolean.

A state of True means that the switch is turned on.

A state of False means that the switch is turned off.

#### 7.163.2 Example URI

`/RestrictedSwitchResURI`

#### 7.163.3 Resource type

The Resource Type is defined as: "oic.r.switch.restricted".

#### 7.163.4 OpenAPI 2.0 definition

```json

7.166 Device Settings Picture Resource Type

7.166.1 Introduction

Gets current device picture settings.

7.166.2 Example URI

/SettingsPictureResURI
7.166.3 Resource type
The Resource Type is defined as: "oic.r.settings.picture".

7.166.4 OpenAPI 2.0 definition

7.170 Generic Measurement Sensor
7.170.1 Introduction
This Resource describes a continuous measurement of some value or property or entity. The Property "measurement" is a number.
The Property unit is a string and will contain an SI unit of measurement in senML format https://www.iana.org/assignments/senml/senml.xhtml

7.170.2 Example URI
/GenericMeasurementResURI

7.170.3 Resource type
The Resource Type is defined as: "oic.r.sensor.measurement".

7.171 UVA Radiation
7.171.1 Introduction

This Resource specifies UV radiation measurement. The Property "measurement" is the current measured UVA. The intensity of UV radiation is measured in the units of milliwatts per square centimetre (mW/cm²) which is energy per square centimetre received per second. UVA is measured between 315 and 400 nanometres in the electromagnetic spectrum.

7.171.2 Example URI

7.173 Colour Rendering Index

7.173.1 Introduction

This Resource describes a Colour Rendering Index (CRI). The Property "cri" is an number. A colour rendering index (CRI) is a quantitative measure of the ability of a light source to reveal the colours of various objects faithfully in comparison with an ideal or natural light source. Light sources with a high CRI are desirable in colour-critical applications such as neonatal care and art restoration.

It is defined by the International Commission on Illumination (CIE) as follows:[1]

Colour rendering: Effect of an illuminant on the colour appearance of objects by conscious or subconscious comparison with their colour appearance under a reference illuminant. The value often quoted as 'CRI' on commercially available lighting products is properly called the CIE Ra value, 'CRI' being a general term and CIE Ra being the international standard colour rendering index.

7.173.2 Example URI

/ColourRenderingIndexResURI

7.175 Sound Pressure Level in dB
7.175.1 Introduction
This Resource describes a measured sound pressure in dB.
The Sound pressure is a property of the sound field at a point in space where the point is the actual location of the sensor.

7.175.2 Example URI
/SoundPressureLevelResURI

7.175.3 Resource type
The Resource Type is defined as: "oic.r.sound.pressurelevel".

7.176 Civic Location

7.176.1 Introduction
This Resource describes the properties associated with the current civic location.
The Properties modelled follow the definition of the Location Object provided by RFC 4119 and
clarified by RFC 5774.
If a Device supports this Resource but has no defined content for it (yet) the response to a
RETRIEVE contains just the "name" Property containing an empty string

7.176.2 Example URI
/CivicLocationResURI

7.176.3 Resource type

7.178 TV Apps

7.178.1 Introduction

This Resource describes an app launch function, which can show an app list and the launched app.

The Property "applist" is a list of applications already installed.

The Property "app" is the name of the application which the user wants to launch.

The property "status" is current operation status of application or set operation. running : App is running or launch app, stopped : App is stopped or stop app. When an app is launched any currently running app is automatically stopped.

7.178.2 Example URI

/TVappsResURI

7.178.3 Resource type

The Resource Type is defined as: "oic.r.tv.apps".

7.179 Vendor List

7.179.1 Introduction

This Resource describes the current vendor and supported vendors for an OCF Device (e.g. the set of possible A/C vendors to which an A/C Assistant can connect).

The current vendor can be read or set, setting indicates a desired vendor. A device may reject an attempt to set a vendor that is not found in supported vendors.

The Property "supportedVendors" is an array of the possible vendor names.

The value of "supportedVendors" is Device specific.

The Property "currentVendor" is one vendor selected from "supportedVendors".

The Property "status" is current operation status when the "currentVendor" is set.

7.179.2 Example URI

/VendorListResURI
7.179.3 Resource type
The Resource Type is defined as: "oic.r.vendorlist".

## 7.180.5 Property definition

Table 368 defines the Properties that are part of the "oic.r.dali" Resource Type.

<table>
<thead>
<tr>
<th>Property name</th>
<th>Value type</th>
<th>Mandatory</th>
<th>Access mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>rt</td>
<td>array: see schema</td>
<td></td>
<td>Read Only</td>
<td>The Resource Type.</td>
</tr>
<tr>
<td>n</td>
<td>multiple types: see schema</td>
<td></td>
<td>Read Write</td>
<td></td>
</tr>
</tbody>
</table>
### CRUDN behaviour

Table 369 defines the CRUDN operations that are supported on the "oic.r.dali" Resource Type.

<table>
<thead>
<tr>
<th>Operation</th>
<th>Create</th>
<th>Read</th>
<th>Update</th>
<th>Delete</th>
<th>Notify</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get</td>
<td>Post</td>
<td></td>
<td></td>
<td></td>
<td>Observe</td>
</tr>
</tbody>
</table>

### DALI Configuration

#### Introduction

This Resource describes a DALI (addressing) configuration, IEC 62386-104, Digital addressable lighting interface - Part 104: General requirements - Wireless and alternative wired system.

#### Example URI

/daliconf

#### Resource type

The Resource Type is defined as: "oic.r.dali.conf".

#### OpenAPI 2.0 definition
